NOTICES TO MARINERS.—QUEENSLAND.

BRISBANE RIVER AND ENTRANCE TO THE ALBERT RIVER.

THE following Notices to Mariners, extracted from the *Queensland Government Gazette*, are published for general information.

J. G. FRANCIS,
Commissioner of Trade and Customs.

Department of Trade and Customs,
Melbourne, 6th May, 1867.

1710.

THE following remarks respecting the entrance to the Albert River—which has been compiled from a report furnished by the Harbor Master at that port, and from other sources—are published for general information.

When making the Albert from the offing, the position of the entrance to the river is shown by three clumps of high trees; the easternmost of which—a clump of withered mangroves—is the west bush of Captain Stokes' chart, the other two are the high trees of Flinders. The coast line to the west of the mouth of the river is covered with mangrove, while the eastern shore is remarkable for being without mangrove, either on the beach or near the sandhills at the back.

The bar (which is apparently dry at low-water) is one mile inside the one fathom line on Captain Stokes' chart, and is four miles from Kangaroo Point, on the east side of the mouth of

No. 51.—MAY 10, 1867.—1.

the river. From the bar, Kangaroo Point bears S. by W. $\frac{1}{2}$ W., and the high trees of Flinders S. W. $\frac{1}{2}$ S.

To cross the bar, a vessel should steer for about $\frac{1}{2}$ miles with the high trees of Flinders bearing S. W. $\frac{1}{2}$ S., until the water deepens two fathoms—Kangaroo Point bearing about S. $\frac{1}{2}$ W.; then haul up and steer S. by W. for the mouth of the river, which will be open to view. The width of the channel is about a quarter of a mile, and the position of the banks on each side—which are dry at low-water—can be distinguished by the lighter color of the water.

A few yards above high-water mark on the sandy beach eastward of Kangaroo Point is a native well, from which a supply of fresh water may be obtained.

The navigation of the Albert above Saltwater Arm is more intricate than would be anticipated from the chart.

The bar appears to be unaltered since it was surveyed by Captain Stokes in H.M.S. *Beagle*, in 1841. The rise of tide was then estimated at from 10 to 13 feet at springs, and 3 to 5 feet at neaps; and high-water, full and change, at Kangaroo Point at 7h. 30m. It is now found that the tides during the N.W. monsoon are higher than those during the S.E. monsoon, when Captain Stokes took his soundings.

G. P. HEATH, Lieut. R.N.,

Port Office, 8th April, 1867.

Portmaster.

Notice to Mariners.

MORETON BAY.—INNER BAR, BRISBANE RIVER.

THE cutting through the Inner Bar—to the southward of the West Beacon—having been completed to a width of 200 feet, and a depth of 10 feet 6 inches at low-water, two triangular black beacons have been erected on the east banks—that to the north-eastward being inverted, and having a white stripe down the centre.

Vessels entering the port will, after passing the West Beacon, keep the lightship open to the eastward of it, until the two beacons on the east banks are in line. When the top of the near beacon is on with the white stripe on the beacon to the north-eastward, a vessel will be in the centre of the cutting, and may continue that course until abreast of Luggage Point.

Masters of vessels are cautioned against anchoring in, or within a hundred yards on either side of, or to the north-eastward of the line of the cutting, or within a cable's length of its south-western entrance.

G. P. HEATH, Lieut. R.N.,
Portmaster.

Port Office, 25th March, 1867.
