1. The first step is to identify the problem. In this case, the problem is that the system is not working properly.

2. The second step is to gather information about the problem. This includes checking the logs, looking at the error messages, and talking to the users.

3. The third step is to analyze the information. This involves looking for patterns, identifying the root cause, and determining the scope of the problem.

4. The fourth step is to develop a solution. This involves creating a plan, testing the solution, and implementing it.

5. The fifth step is to monitor the system. This involves checking the logs, looking at the error messages, and talking to the users to make sure the problem is solved.

6. The sixth step is to document the solution. This involves writing a report, creating a knowledge base article, and updating the documentation.

7. The seventh step is to review the process. This involves looking at the steps that were taken, identifying areas for improvement, and making changes to the process.

8. The eighth step is to communicate the results. This involves telling the users that the problem is solved, sharing the solution with the team, and reporting the results to management.

9. The ninth step is to evaluate the outcome. This involves looking at the results of the solution, comparing them to the original problem, and determining if the problem is solved.

10. The tenth step is to close the ticket. This involves marking the ticket as closed, deleting the logs, and removing the error messages.
