Applications for the positions above named, which must not be enclosed in franked envelopes, will be received only from qualified teachers in the service, must be addressed to the Committee of Classifiers, Education Office, Melbourne, and reach this office not later than seventeen days from the date hereof. Should more than one position be applied for, the order of preference must be stated, but separate applications are not now required.

Payments will be made on the percentages of the schools to which teachers are transferred, whether the percentages are those stated above or have been obtained at subsequent examinations.

Teachers applying for positions lower than their classification must signify their willingness to accept the pay and status thereof, with the understanding that they cannot regain their present classification except in the ordinary course of promotion.

Licensed pupil teachers may apply for 7th and 8th class positions.

The Head Teacher is requested to post this list in his school for a week for the information of his staff.

FRANK TATE,
Director Public Instruction.

E. WM. COWLISHAW.
Officer by whom the foregoing Statement was prepared.

I, EDWIN WILLIAM COWLISHAW, of Melbourne, make oath and say that I prepared Weekly Statements of the above Bank during the Quarter from the 31st March to the 30th June, 1902, in accordance with the Banks and Currency Act 1899, and from the said Statements prepared the above Abstract, and that, to the best of my knowledge and belief, the said Weekly Statements are full and true in every particular, and that the coined gold and silver and other coined metals, and the gold and silver in bars and bullion, as stated in every such Statement, faithfully represent the true amounts on hand after payment of the balances due to other Banks upon the weekly balances of exchange, excepting the amounts mentioned in such Statements under the heading "Balances due to other Banks"; and the above Abstract is an accurate Abstract of the said Weekly Statements, and a true and faithful account of the Average Amount of Assets and Liabilities within the State of Victoria of the above Bank during the period specified.

E. WM. COWLISHAW.

And I, GERALD THOMAS BAKER, of Melbourne, make oath and say that, to the best of my knowledge and belief, the foregoing Statements of the said Edwin William Cowlishaw are true in every particular.

Sworn before me, at Melbourne, this } J. P. BAINBRIDGE, Justice of the Peace.
8th day of July, 1902,

G. T. BAKER.

THE MELBOURNE AND METROPOLITAN BOARD OF WORKS.

By-Law No. 9.

By-law regulating the construction and use of sewers and drains and household fittings and appliances connected therewith, within the area under the control of the Melbourne and Metropolitan Board of Works.

WHEREAS the Melbourne and Metropolitan Board of Works, hereinafter called "the Board," in exercise of the powers vested in it by the *Melbourne and Metropolitan Board of Works Act 1890*, hereinafter called "The Principal Act," did on the eleventh day of December, One thousand eight hundred and ninety-four, make and pass a By-law numbered 5, and intitled "Regulations for the construction and use of sewers and drains within the area under the control of The Melbourne and Metropolitan Board of Works." And whereas the Board did on the twelfth day of October, One thousand eight hundred and ninety-seven, make and pass a By-law numbered 7, which repealed the aforesaid By-law No. 5, and provided for regulating the construction and use of sewers and drains and household fittings and appliances connected therewith, within the area under the control of the Board. And whereas it is expedient that the said last-mentioned By-law No. 7 should be amended and altered. Now, therefore, the Board, in further exercise of the powers vested in it by the Act aforesaid, and the Acts amending the same, and which together are hereinafter called "The Act," doth hereby enact and order as follows:—

1. From and after the date of this by-law coming into operation the hereinbefore recited By-law No. 7 shall be and the same is hereby repealed, and in lieu thereof the following shall be the regulations for the construction and use of sewers and drains within the area under the control of the Board. Provided that such repeal shall not affect any licence issued or thing authorized and commenced to be done under the provisions of the said by-law.

2. All connexions of plumbing work, drains, or sewers with the sewers of the Board, and all work connected in any way with the drainage of any premises, shall be executed in accordance with these Rules and Regulations.

3. All drains in and from properties to and as far as the point of connexion of the branch drain with the sewer must be repaired and cleansed by, or at the cost of, the occupier.

Preparation of Plans and Method of Carrying out House Connection Work.

4. All the works of sewerage and drainage must be carried out in accordance with the provisions of Part III. of the Act, or any existing modification thereof.

In case of any obstruction taking place in a combined drain, the Board will determine between the respective owners or occupiers of the premises drained thereby by whom and in what proportion the cost of removing any such obstruction shall be paid.

Every person who, by a notice from the Board, issued in accordance with the Act, shall be required to do or not to do

anything, including a requirement to make any sewer or drain, or branches, works, or arrangements for the better sewerage or draining of his house, building, or ground, and who fails to comply with such notice, will, under the provisions of section 165 of the Act, become guilty of an offence against the Act, and for every such offence, unless other penalty be prescribed by the Act, he will be liable to a penalty not exceeding Twenty pounds and to a penalty not exceeding Five pounds, nor less than One pound, for each day during which such offence is continued by him, besides any costs or expenses which may be incurred in taking proceedings against him, as well as any costs or expenses which may be incurred in remedying any default of his, and such penalty, costs, and expenses will be recoverable, notwithstanding that the Board may not have chosen to exercise any power given to it by the Act to remedy such default.

With a view to obviate the incurring of liability to such penalties, the Board will, in exercise of its powers and duties, contract and agree with the owners of houses, buildings, or ground to perform any work which may be required to be done by any notice issued by the Board to any owner, on terms hereinafter stated. The owner of each and every property which or any part of which abuts on any street or part of a street in which a sewer has been laid, if there be any houses or buildings on such property, shall within such time as shall be specified in the further general notice which the Board shall have caused to be served upon him, or within such further time as the Board may allow, provide such proper water-closet or water-closets, drains, appliances, apparatus, and connexions with such sewer of the Board as are then prescribed by regulations of the Board.

Within one month after the date specified in the said further general notice, or within such further time as the Board may either before or after the expiration of one month allow, every such owner shall—

- (a) submit for the approval of the Board a plan for providing such property with such water-closet or water-closets and such drains, appliances, apparatus, and connexions fitted and laid in such manner as may be prescribed by the regulations of the Board or any modification thereof which the Engineer-in-Chief of the Board on written application made to him shall in writing under his hand approve, and such owner shall in writing undertake to carry out such plan within one month or such further time as the Board may allow, or shall in writing allow if the same is approved by the Board; or
- (b) submit for the approval of the Board a plan as aforesaid and in writing request the Board if it approves thereof to give an estimate of the cost and expense thereof, and thereupon the Board will do so; or in writing request the Board to prepare a plan as aforesaid and give an estimate of the cost and expense thereof, and thereupon the Board will do so. As soon as the Board gives such estimate such owner shall in writing undertake to carry out such plan within one month or such further time as the Board may allow, or shall in writing request the Board to carry out the same at the cost and expense of the said owner for the estimated amount, and thereupon the Board will do so.

If within such one month or such further time any such owner has not complied with any of the foregoing requirements, or if after undertaking so to do any such owner has not within the limited time provided such water-closet or water-closets and such drains, appliances, apparatus, and connexions as aforesaid then the Board may order such owner to comply with such of the requirements of the said further general notice as it deems to be necessary, or may carry out such undertaking (as the case may be), and such order shall be deemed to be an order within the meaning of section one hundred and ten of the Principal Act.

In the event of the Board carrying out the work of providing such water-closet or water-closets and such drains, appliances, apparatus, and connexions, the Board will at its own cost and expense keep and maintain the same in good repair for a period of twelve months from the time of completing the said work unless the necessity for such repair is caused by the wilful act or negligence of the owner or occupier.

At the request in writing (in such form as may be from time to time prescribed by the Board) any tenement owner having to connect his tenement with a sewer of the Board, who shall not have applied to the Board under sub-section 6 of section 3 of Act No. 1491, for an estimate of the cost of making such connexion, and who shall make such request subject to and in agreement with the undermentioned conditions the Board may at its discretion direct that tenders for the work be publicly invited by newspaper advertisement, such tenders to be for the performance of the work of connecting the tenement with the Board's sewer and providing all sanitary and other requisites to comply with the Board's order or the tenement owner's sanitary requirements in accordance with plan prepared or approved by the Board, specification, and conditions of contract relating thereto prepared therefor by the Board at the expense of the tenement owner, and for maintaining the work done in good repair for twelve months from and after the date of the Engineer-in-Chief's certificate that the work has been completed; and thereupon such a tender on behalf of the Board may, if the Board think fit, be placed in the tender-box prior to the time named for the reception of tenders. And the Board will accept such tender whether its own or not as under all the circumstances shall appear to the Board most advantageous to the tenement owner. And upon completion of the contract and on the certificate by the Engineer-in-Chief of its having been completed to his satisfaction and of the costs and expenses of and incidental to the performance of such contract work such tenement owner shall forthwith pay to the Board such costs and expenses so certified, or if he shall so desire, in instalments, with interest as prescribed by section 6 of Act 1491.

The Board may cause the works hereinbefore mentioned to be inspected while in progress and from time to time during their execution the Engineer-in-Chief of the Board or such other officer as the Board may appoint for the purpose may in writing order such reasonable alterations therein or additions thereto as to the said Engineer-in-Chief or other officer may seem necessary.

In all cases in which the Board provides any water-closet or water-closets or drains, appliances, apparatus, and connexions pursuant to the requirement of any owner as hereinbefore provided, or performs any works, matters, or things under section one hundred and ten of the Principal Act, or under section five of the Melbourne and Metropolitan Board of Works Act 1857, the costs and expenses thereof with interest at the rate of Five pounds per centum per annum shall be recoverable after the expiration of one month from the time that the Engineer-in-Chief of the Board, or such other officer as the Board may appoint for the purpose, certifies in writing to the Board that the same have been provided or performed and the amount of the costs and expenses thereof.

Until paid such costs, expenses, and interest shall be and remain a charge upon the property in respect to which they were incurred, and may at the expiration of seven days after demand in writing therefor be recovered at any time from the owner thereof for the time being.

At the request of the owner the Board will accept payment of such costs and expenses by forty quarterly instalments, bearing interest on such portion as from time to time remains unpaid at the rate of Five pounds per centum per annum.

Such request must be made in writing and signed by the owner and must be lodged with the Board within one month from the time of such owner being notified in writing by the Board of the amount of such costs and expenses. The first quarterly instalment shall be payable immediately on the expiration of the said month. But the said owner may at any time pay to the Board such portion as then remains unpaid of such costs and expenses, together with interest thereon, at the said rate to the date of such payment.

In the event of any of the instalments or interest not being paid within fourteen days after the due date thereof, the whole amount then unpaid of the costs and expenses shall, if the Board so desires, become due, payable, and recoverable with interest at the rate of 5 per centum per annum as prescribed by section one hundred and sixteen of the said Principal Act.

Payment of any instalment and interest may be recovered in the like manner as is provided by section one hundred and sixty-two of the said Principal Act for the recovery of damages, costs, expenses, or penalties.

The certificate of the Engineer-in-Chief, or such other officer as aforesaid, in writing, shall be *prima facie* evidence in any court that the water-closet or water-closets or drains, appliances, apparatus and connexions have been provided, or the works, matters or things have been performed (as the case may be), and *prima facie* evidence as to the amount of costs, expenses, and interest recoverable in respect thereof.

Consents, &c.

5. Application for the Board's consent to connect with the sewerage system, or to do plumbing work connected therewith must be made in writing, by the owner of the property to be drained, or his authorized agent. Such application shall give the precise location of the property, the name of the owner, and the name of the person employed to do the work, and shall be

made in Form "A" hereto attached, or to the like effect. No consent shall be deemed to authorize anything not stated in the application, and for any wilful misrepresentation in such application the owner or authorized agent as aforesaid shall be guilty of an offence and liable to a penalty under these regulations.

Consents to make connexions with the sewerage system will be issued only when the plumbing in the property to be connected is planned to be made in accordance with the rules for plumbing, hereinafter prescribed, and after such plan has been inspected and approved of by the inspector appointed by the Board for the purpose, or, in case of new buildings, when a proper plan of the plumbing and of the drainage of the building into the Y branch which the Board shall have decided and fixed the position of, has been approved of in writing by the Board. All connexions with the drains or sewers, and all plumbing connexions therewith, shall be made under the direction of the Engineer-in-Chief or other superintending officer of the Board.

Consent will not be given for the performance of any such work except upon condition that no person shall be engaged or employed as a workman in the actual performance of any plumbing work unless he be the holder of a "Working Plumber's Licence" from the Board.

The conditions upon which "Working Plumbers' Licences" will be issued by the Board are:—

1. That every such licence will be subject to suspension or cancellation at the will of the Board; and that all such licences will be granted to expire on the thirtieth day of June of each year.

2. A special condition of every consent issued to an owner or agent shall be that if a licensed plumber, in his employment upon any such work, prove according to the judgment of the Board's Inspecting Officer to be incapable as a workman, or transgress the regulations of the Board, and the "Working Plumber's Licence" of such workman be for any such cause suspended or cancelled by the Board, and notice of such suspension or cancellation, in the Form "B" to this By-law annexed, or to the like effect, be given by the Board in writing, by registered letter addressed to the said owner or agent, the said owner or agent shall cease to employ such workman upon any such work immediately after and during the continuance of such suspension or cancellation. And any such owner or agent who shall neglect or fail to comply with this condition shall be liable to a penalty not exceeding Ten pounds, and to a continuing penalty of not more than Two pounds, nor less than One pound, for every day during which such neglect or failure shall continue after service of the hereinbefore mentioned notice upon such owner or agent.

3. First-class "Working Plumbers' Licences" will be issued to candidates who shall have successfully passed an examination by examiners appointed by the Board in the following subjects, that is to say:—

Materials.—The use of lead, tin, copper, and their alloys, wrought and cast iron, stoneware bricks, tiles, Portland cement, and other materials used by the plumber and drainer.

Plumbing Practice.—As to solder and soldering, lead burning, lead laying, pipe and joint making, pipe bending, and general plumbers' practice.

Water Supply Work.—Knowledge of the Board's Water Supply By-laws, general water supply work, water supply fittings, hot water connexions.

Sewerage Work.—Knowledge of the Board's Sewerage Regulations, construction and use of traps, soil, waste, and vent pipes, house fittings, water-closets, kitchen sinks, baths, lavatories, housemaids' sinks, urinals, latrines, and other sewerage apparatus and appliances.

General Principles of Sanitary Work.—Flushing, ventilation, disconnection.

Candidates for examination in plumbing practice must provide themselves with their own tools, and may be required to submit samples of work done by themselves, and also make any pipe, bend, joint, or other plumbing appliance which may be required to satisfy the examiners.

4. Candidates for "Working Plumbers' Licences" must give notice in writing to the Secretary of the Board of their intention to submit themselves to examination at such time as shall be appointed for the same by the Board's examiners.

Every candidate who shall have successfully passed the before-mentioned examination, and given proof to the satisfaction of the examiners of practical ability as a plumber, will be furnished with a first-class licence from the Board to do practical work as a working plumber upon and in connexion with the sewers, drains, and all necessary fittings, appliances, and apparatus appurtenant thereto within the Metropolitan Board of Works, and in accordance with the Board's regulations. And he will likewise be furnished with a certificate from the Board that he is duly qualified to do work in connexion with the Water Supply and Sewerage Systems under the control of the Board, and in accordance with the Board's regulations.

Every candidate who shall have successfully passed the examination in plumbing practice only, will be furnished with a second-class licence.

"Working Plumbers' Licences" will, at the discretion of the Board, be issued without previous examination to any practical plumber who shall be the holder of and shall produce a licence from any other Sewerage or Water Supply authority equal in value to the standard established by the Board's examination according to the judgment of the Board's examiners, which shall be final, subject only to review by the Board.

Prior to the issue of any "Working Plumber's Licence," the person to whom the same is to be issued must sign a Register containing a declaration that he accepts such licence subject to and in conformity with the conditions thereof and with the regulations of the Board, and that he will conform to and comply therewith.

Whilst none but the holders of "Working Plumbers' " licences are allowed to be engaged or employed in the performance of plumbing work for sewerage, the holders of licences for water supply work may do water supply work necessary to the sanitary work, such as fixing cisterns and water-closets in outside buildings where lead is not used, and work for water supply.

Plans of Drainage.

6. Copies of the Board's plans will be furnished by the Board upon application and payment for the same, as follows:—

Plan of drainage, including survey, &c., for every house or building, a minimum charge of 5s., and an additional charge of 5s. for every water-closet more than one, and of 10s. for each latrine in or appurtenant to such house or building.	
Plan of any alteration or addition to original plan	2s. 6d.
Plan of alteration or addition to water-closet, latrine, or lavatory (for each such alteration or addition)	2s. 6d.
Plan of drainage	2s. 6d.

The charge for amendment of plan is to be taken as meaning a charge of 2s. 6d. for plan only, and not per number of closets.

No fee is to be charged for plan when the plan submitted by owner can be altered to suit the Board's requirements without involving much labour or time.

In order to facilitate owners submitting plans in accordance with sub-section 6a of section 5 of Act No. 1491, the Board will supply plans of individual tenements at the rate of 1s. on each municipal valuation, with the position of sewer and approximate position of branch to which the house drain must be connected marked in red, together with the approximate depth of the Board's sewer.

If tracings of groups of houses are required from the Board's plans, together with the position and depths of the Board's sewer marked thereon, they will be supplied on payment of the cost of the tracing at the rate of 2s. 6d. per hour, according to the draughtsman's time occupied thereon.

Inspection.

7. The owner or his authorized agent, or the plumber or contractor carrying out the work, must give notice to the Board of his intention to commence work, at least 48 hours before commencing operations on same, and also when any work is ready for inspection, and all work must be left uncovered and convenient for examination until inspected and approved of by an inspector appointed by the Board. Such inspection shall be made within 48 hours of such notification being received at the office of the Board, except on Saturday, when 72 hours must be allowed. The inspecting Officer may apply the other, peppermint, water, or smoke test, and the plumber shall furnish all the necessary tools, labour, and assistance for such tests. The owner or his authorized agent shall remove or repair any defect when so ordered by the inspecting Officer, and if he neglect or fail to do so he shall be liable, upon conviction, to a penalty not exceeding five pounds, and to a penalty not exceeding one pound for every day thereafter which such neglect or failure shall continue.

Any drain pipe, soil pipe, trap, water-closet, urinal, sink, or other fitting laid, used, or constructed otherwise than in accordance with these regulations, or which shall, in the opinion of the Board, be or become bad or of defective quality, shall, upon notice in writing from the Board to the owner or occupier of the property, be by such owner or occupier removed or repaired in the manner determined and within the time fixed by the Board, and in case such owner or occupier fails to comply with the requirements of such notice he shall be liable to prosecution and penalty for an offence against the Principal Act, or the Board will, if it think fit, remove or repair the said defective fitting, and charge such owner or occupier of the premises with the cost so incurred, and will proceed for recovery of the same in manner provided by the said Act.

Before or after, if so ordered, the fixtures are placed in connexion with the plumbing of any house or building, and before the soil or waste pipe is connected with the sewer, the outlet of the soil or waste pipe, and all openings into it below the top, shall be hermetically sealed. The pipe shall then be filled with water to such height as the Superintending Officer of the Board shall require, and every joint carefully examined for leaks. Work already in place may be examined by the peppermint or other test. Defective pipes must be removed and replaced by sound ones, and all defective joints made tight, and every part of the work made to conform to these rules and regulations, and subject to the approval of an officer appointed by the Board.

House drains, whether laid by the Board's workmen or others, must be thoroughly tested in every case before being passed by the Board's officers.

Before a licensed plumber commences to clear a stoppage in a drain he must notify the Board in writing of the time when he intends to clear the stoppage, so that an inspector may attend and pass the work in accordance with the provisions of section 106 of the Board's Act.

Statement of Work done.

8. The owner or his authorized agent, or the plumber or contractor carrying out the work shall, on the completion of such work, and within seven days of such completion, file in the office of the Board, on forms furnished for the purpose, a correct statement of the work done under the consent furnished for the same.

The statement that the work done is "correct" must be certified to by the counter signature of the Board's inspector.

Injury to Sewers.

9. No municipal council, corporation, firm, or person shall interfere with, break up, remove, or build over with any fence or other structure, any sewer or drain, gully, ventilating shaft,

man-hole, lamp-hole, flush-tank, catch-basin, or any part of the Board's sewerage system, except by a special permit in writing of the Board, or throw or deposit, or cause to be thrown or deposited, in any drain or sewer, opening or receptacle connected with the sewerage system, any garbage, offal, dead animals, vegetable parings, ashes, cinders, rags, or any other matter or thing, which, in the opinion of the Board, may injuriously affect the sewers or sewerage machinery.

Construction of Reticulation.

10. Roads, lanes, passages, alleys, or courts, which the owners or occupiers of two or more houses or buildings adjoining thereto, or properties abutting thereon, have the right to use or do commonly use as a means of access to or drainage from such houses, buildings, or properties, are streets, and in them the Board may make sewers that vest in it, and are public sewers into which, with consent of the Board as owner of the sewers, any person may branch his private drain, and to these public sewers there must be no obstruction, and no building or fence shall be erected over them unless with the Board's consent, but the Board is not under obligation as to the streets in which sewers shall be made, and it may decide what streets it will not make sewers in, as, for instance—

- Where there is no main sewer into which a reticulation sewer can be branched; or where a sewer is not necessary, because in the opinion of the Board there is already sufficient provision for the purpose.
- Where the owner would avail himself of the interposition of some narrow strip or small space of land, as an obstruction, or should otherwise arrange to prevent owners of adjacent property from making use of the sewer—the principle being that if the owner desires to keep the sewer for the sole use of his property to the exclusion of any of the public, the cost of the sewer should be borne by him and not by the public.
- Where the laying of the sewer would endanger the buildings and the owners will not indemnify the Board against claims for damage.
- Where any proposed lane, passage, or right-of-way is not clearly marked out upon the ground, is not at least 10 feet throughout in length or breadth, or where there is a claim to exclusive use of a sewer if laid therein.

General.

11. All materials used must be of good quality and free from defects. The work must be executed in a thorough and workmanlike manner, and to the satisfaction of the Board.

The utmost care must be exercised on all house connexion work to insure that materials which are in accordance with the Board's by-laws only are allowed to be used. Inspectors will be held responsible for detecting the use of unsuitable materials, and for at once reporting any attempt to use unsuitable material. Occupiers of premises are responsible for clearing stoppages in drains within or between their premises and the sewers into which the branches lead.

Alterations in approved plans or to works previously approved are to be made only on application of the owner or authorized agent.

Drains.

12. The drainage of each house is to be arranged for separately, unless in cases of properties belonging to the same owner, or where special reasons exist, in the Board's opinion, for draining by a combined operation.

Owners desiring to have the drainage of their properties combined must sign a request for a combined drain.

Not more than two houses are to be combined except by the permission of the Engineer-in-Chief.

When the drainage of more than two properties is combined, an inspection chamber must be provided where ordered or shown on plan.

Where several properties are connected with a private reticulation pipe, there shall be a boundary trap at the building line, and the drain to each individual house shall have its own boundary trap.

At the head of every connecting branch to the Board's sewers at or near the boundary of the premises a boundary trap must be fixed, with or without a man-hole, as may be ordered by the Board. All the drains must, wherever considered necessary by the Board, join in a man-hole at least three feet (3 feet) long and two feet (2 feet) wide, fitted with a closed cover if for inspection purposes only, and with an open grating in connexion therewith if for ventilation purposes. The portions of the drains crossing the floor of the man-hole must be connected with the boundary trap, either in a straight line or by curved junctions in the floor of the man-hole. The boundary trap must be provided with a seal two and a half inches (2½ inches) deep, and an inspection cap on the sewer side of the trap.

Where an open grating is inadvisable, the man-hole must be provided with a closed cover with a fresh air inlet, fitted with a mica flap valve; or a ventilation pipe of such size and materials, and so placed as the Board may direct, shall be provided and fixed wherever considered necessary.

The drains outside of the house or building, or from isolated water-closets, to the street sewer, shall be of first quality salt-glazed vitrified, stoneware pipes, unless laid less than 2 feet deep from the surface to the centre line of the pipe, in yards or places liable to heavy traffic, when they shall be of heavy cast or wrought iron. Heavy cast iron pipes must be used if the ground has been made up or filled in, or adjoins a cellar.

Where more than two houses aggregating over £80 valuation are combined a chamber man-hole must, whenever ordered by the Engineer-in-Chief, be provided at the boundary trap at the building line, and either an inducet vent taken into the chamber with an educt vent at the head of the drain, or an educt vent taken off the chamber man-hole with an inspection shaft cover

at the upper end. If so desired, the boundary trap from the house at the upper end of the system may be omitted, and the main system vented by an educt vent on that property.

Portland cement concrete must be used in each of the following cases:—

- a. Around and under gully basins, and must be properly finished off in cement mortar.
- b. Around the top of educt vent and induct vent pipe sockets where exposed, and boundary trap covers where the surface is not paved.
- c. Under bends rising vertically off oblique branches.

No cesspool overflow or privy-vault shall be connected with any drain or sewer.

Whenever a paved, asphalted, or tar-paved yard or space has been broken in connexion with house drainage, the surface where so broken must be restored as nearly as possible to the same condition as it was in previously.

Heavy boundary trap covers must be used in all areas subject to vehicular traffic, and in special cases where ordered.

Pipe Trenches.

13. The trenches for the drains for all properties shall be dug so as to meet the public sewers at the position of the Y branches indicated by the Board. The material from the trench shall be placed so as not to obstruct, and so as to cause the least possible inconvenience to the public. Proper barriers and lights must be maintained on the banks of the trench during the progress of the work, to guard the public against accident. In refilling the trench the earth shall be carefully rammed or flooded, so as to keep the pipe in position and avoid settling. No stone shall be used in refilling until there has been a depth of at least 2 feet of earth or gravel placed over the pipe.

Subsoil Drainage.

14. Every person who shall erect a new building shall cause the subsoil of the site of such building to be effectually drained by means of suitable earthenware field pipes properly laid to a suitable outfall, whenever the dampness of the site renders such a precaution necessary in the opinion of the Board.

No such pipes shall be laid in such a manner or in such a position as to connect directly with any drain or sewer, but shall discharge into a man-hole or open shaft made of earthenware pipes, and fitted with a dirt box which shall communicate with the sewer by a proper trap with a ventilating pipe on the sewer side.

Where the soil round the foundations is damp, trenches must be dug either round the building or in the cellar. In these trenches drain pipes must be properly laid, that is, with joints covered with tarred canvas, with as much fall as can be obtained on even grades, and packed round with broken stones.

The "proper" trap must be one the seal of which is to be maintained by a pull and chain cistern, unless some waste pipe connect with it.

Cellar Drainage.

15. Where any house shall have its lowest floor at a lower level than the sewer of the Board into which such house would otherwise drain, pending pulling down or alteration of such house, the owner shall cause the drainage from such lowest floor to be raised by means of a syphon, or some other method approved by the Board, so that it shall discharge into a drain communicating with the sewer of the Board. The water-seal of the trap in the drain-pipe leading from the cellar shall be constantly maintained by means of a pull and chain flushing cistern.

The drainage system of a building is to be designed so as to carry away the drainage from any fitting approved of by the Engineer-in-Chief placed in an existing cellar if the waste or soil pipe can be connected into an existing sewer of the Board, and on such conditions as the Board may demand.

No fitting requiring to be drained by syphon or other automatic method shall be placed in a cellar or basement except by permission of the Engineer-in-Chief.

Whenever possible the soffit of the pipe draining the cellar should at its highest point be at least 2 feet below the cellar or basement at its lowest point.

An owner may use a sluice valve with a reflux trap or an automatic syphon for basement drainage, but a reflux trap only must not be used unless upon application by the owner and statement that it is at his risk.

Reflux traps when placed on basement drains must be fixed on the sewer side of any traps through which the sewage is liable to rise.

Stables, Rain Water, and Paved Yards.

16. Rain-water conductors must not be connected with the sewers unless approved by the Board. All stables, dairies, paved yards, market places, cab stands, receptacles for sludge water from manufactories, areas where milk-cans are washed, and all polluted areas, must be graded, cemented, asphalted, flagged, paved, and drained to the satisfaction of the Board, and the drain therefrom must be trapped with an approved silt trap, connected with the drain inside the boundary trap.

All stables and cowsheds in actual use must be paved and graded to the satisfaction of the Board, and connected with the Board's sewers.

The drainage of those not in use must be provided for, but they need not be connected with the sewers while they are unused.

The drainage from a single-stall stable may discharge over the grating of a single silt trap; where there are more stalls than one the silt trap must be lowered, and a square grating without stoneware top fixed over the trap below the surface level.

If foul water enter a street from an area used for washing vehicles, or other things needing to be cleansed with water, the portion where washing is done shall be paved and the foul water led to a silt trap connected with the sewers.

Manure bins must be provided for all stables or cow-yards, where the local council's by-laws demand their construction, or where the area is closely built on.

All manure bins must be made watertight. New bins must be built of brick with impervious floor, and be rendered inside with cement mortar.

If an outlet pipe be provided for a manure bin, it must be properly connected with the Board's sewers.

Branches in house drains must be provided in all cases where manure bins exist, for their connexion whenever the Board shall deem it necessary.

Laying Drains.

17. All drain pipes must be at least 4 inches in diameter, except where otherwise ordered by the Board, and unless obtained from the Board's store yard, must be taken to one of the Board's depôts to be tested by the officer appointed by the Board, in the machines provided for the purpose.

The cover of the Y branch on the sewer shall be carefully removed so as not to injure the socket.

The first length of the pipe attached to the Y branch shall be curved and set so as to give a good fall into the sewer.

All pipes shall be carefully bedded in the solid ground. Where, in the opinion of the Board, it is necessary cast-iron pipes must be used or stoneware pipes bedded in concrete of approved dimensions, such concrete to be composed of one of Portland cement, two of clean sand, and five of stone of 1½-in. gauge or gravel approved by the Inspector.

Where there is no sewer in the street, or it is necessary to construct a private drain to connect either one or several properties with a sewer in an adjoining street, the drain must if possible be laid under the roadway or right-of-way, instead of through the yards or under the houses.

The drain pipes shall be laid on an even grade of not less than 1 in 40 if a 4-in. pipe be used, or of 1 in 60 if a 6-in. pipe be used, unless by special permission of the Board, in which case special provision must be made for regular and efficient flushing. As far as possible, all drains shall be laid in straight lines; where changes of direction occur, they shall be made either by suitably curved pipes or in man-holes.

Stoneware drain pipes may be substituted for cast-iron drain pipes in every case except where the ground is soft or liable to heavy traffic, but in all cases where stoneware is substituted for cast-iron the pipes must be entirely surrounded by not less than 6 inches of Portland Cement Concrete, whether inside or outside buildings.

All drain pipes carried through walls must have a space of about 3 inches clear left over the pipes.

If a pipe be cut out to clear a stoppage, or if a pipe be broken, it must be replaced by a new pipe. The old pipe must not be patched up.

All cast-iron pipes must be sound, free from holes or cracks, and coated with tar or asphaltum.

The following weights will be accepted as standards for cast-iron drainage pipes:—

4-in. diameter	16 lbs. per lineal foot.
5 " "	20 " " " "
6 " "	23½ " " " "

All fittings used in connexion with such pipes shall correspond with them in weight and quality. All junctions must be curved; right-angled junctions must not be made.

Where outside closet buildings require repairing or removing the necessary work within the space covered by the closet buildings must be carried out before the water-closet branch is laid; but other portions of the drain may be laid, provided provision be made for effectually testing the closet branch when laid.

Joints.—Drainage.

18. All joints in iron drain pipes, soil pipes, and waste pipes, except where screw joints are used, must be so filled with gasket and lead and caulked as to make them gastight.

All connexions of lead pipes with iron pipes must be made with a brass sleeve or ferrule of the same size as the lead pipe put in the socket of the branch of the iron pipe and caulked with lead.

The lead pipe must be attached to the ferrule by a wiped joint.

The joints of the stoneware pipes shall be made with Stamford joints, or cement joints with gaskets.

Joints of iron pipes shall be made with gasket and lead if cast-iron pipes be used, or screwed joints with white lead if wrought-iron be used.

The ends of all private drains not immediately connected with the plumbing fixtures shall be securely closed with watertight, imperishable materials. If stoneware, a stoneware or cast-iron disc must be cemented in; if wrought iron, a plug must be screwed on the end; if cast-iron pipe, a cast-iron plug must be caulked in with lead.

Connexions of galvanized sheet-iron vent pipes to cast iron do not require a brass sleeve, unless ordered by the Engineer-in-Chief.

Vent Pipes.—Drainage.

19. The main drain leading to the boundary trap must be vented at its upper end by a pipe or shaft erected vertically to such a height that the mouth of the pipe or shaft shall be at least 6 feet higher than any window or door situated within a distance of 30 feet therefrom. Branch drains need not be vented if the drainage traps are within less than 15 feet from the main drain, or unless otherwise ordered by the Board, in which case they must be vented according to such order. If the drains cannot be vented at the upper end, the system must be reversed.

Every vent pipe extending upwards from a soil or drain pipe must be carried to such a height as may be deemed necessary by the Board, and in any case at least 2 feet above the highest part of the roof or coping.

Every vent pipe must be of undiminished size, without return bend, with basket end, or duct or induct cowls as ordered, and it must not open near a widow, a chimney, nor an air shaft which ventilates living rooms.

All vent pipes, in an extension of a main building, when otherwise they would open within 30 feet of the windows of the main building, or of the adjoining building, must be extended to such a height above the roof of the main building as may be deemed necessary by the Board.

All the main educt vents on house drains shall be of the same diameter as the drains unless special permission be given to vary their dimensions.

No brick, earthenware, or house chimney flue shall be used as a sewer ventilator, nor to ventilate any drain, soil, or waste pipe.

All inlets to drains, or openings for ventilating, shall be efficiently protected by proper gratings of ample area. The aggregate area of the apertures in any grating covering a ventilation opening shall not be less than the sectional area of the pipe or drain to which such grating is fixed. All openings for ventilation made in accordance with these regulations, or upon order of the Board, shall at all times be kept open and perfectly free from obstruction.

All galvanized sheet-iron vent pipes (except those used as anti-siphonage pipes to disconnected fittings) must be coated with hot tar or asphaltum inside before erection.

Whenever vent pipes from drains are not more than 12 feet above the offset they will not require staying; if longer they should be stayed with $\frac{1}{2}$ -in. galvanized wrought-iron pipe.

When a galvanized sheet-iron pipe, with or without an offset, is carried up 12 feet or more above the brick wall of a building a galvanized wrought-iron pipe clip shall be used at top leaded to the wall wherever possible and bolted against vent pipe.

A length of 20 feet of straight vent pipe without offset may be fixed without stays.

There shall be at least one pipe hook or clip to each 6-ft. length of vent pipe.

When vent pipes terminate more than 6 feet from chimney opening at the same level the ordinary rules as to height are to apply; but when the distance is 6 feet and under the vent pipe must terminate 2 feet below the chimney opening. Vents must, as far as possible, be kept away from chimneys.

When it is not possible to carry a vent pipe above the parapet or ridge the pipe must be carried up as high as it will stand without staying, provided it is 30 feet from a window or door. When it is at a less distance than this it must be carried up 6 feet higher than any window or door opening within that radius of the vent pipe, and have sufficient stays to support it.

When a sufficiently strong support cannot be obtained for the induct vent pipe, a strutted redgum post of dimensions not less than 3 inches x 3 inches must be fixed to support it.

When venting drains to reflux traps the boundary trap must be kept close to the building, an inspection shaft open-cover placed over it, and it must be v-vented at the back of the front wall, through the roof if possible, unless otherwise ordered by the Engineer-in-Chief.

In any case of cellar drainage ventilation where, in the opinion of the Engineer-in-Chief, the length of the drain connecting the premises with the sewer and the shortness of the distance between the cellar and the boundary trap shall render such a course advisable, the vent pipe may be taken from the sewer side of the boundary trap, and the ventilation shaft must be entirely outside the building. But if the vent pipe be taken from the house side of the boundary trap the ventilating shaft may be inside the building.

When ground or level vents are used with boundary trap, they must be 30 feet away from any door or window.

Traps.—Drainage.

20. Traps of three (3) classes will be used:—

- (a) "Traps," for intercepting gases only, to be of round section and self-cleansing form, but not so easy as to empty by momentum or suction.
- (b) "Silt traps," for intercepting both gases and solids, to have slightly tapered sides, flat bottom, and rounded, not sharp angles, and provided with trays fitted with handles for catching and removing solids.
- (c) "Grease traps," for solidifying and collecting grease or other semi-fluid matter liable to foul the pipes, must be of such form as may from time to time be approved.

The term "gully" is applied to traps (a) and (b) in cases where they are to be used externally, and fitted with dished tops and gratings. In such cases the dish must be in one piece with the trap, or jointed thereto spigot and faucet, and the depth of the dish from the top to the grating must not be less than 6 inches, and the grating must be removable.

The term "disconnector" is applied to traps in cases where provision has to be made for inlet ventilation to the pipe or pipes discharging therein.

All traps must have a water-seal of at least half the diameter of the outlet pipe, but in no case of less than 2½ inches.

Unless a slop-sink be fixed inside the building a gully trap must be provided in the yard of every house, placed as near as possible to the back of the kitchen door, with a tap placed over it at a height of about 2 feet, except in cases where the owner desires the tap to be placed higher.

Gratings to gully traps must not be less than 6½ inches over all, with openings of suitable outlet capacity.

If no wastes from fittings discharge into the gully trap a tap must be fixed over it.

All gratings must be fixed down with bitumen or wedges of lead, but in gully-trap basins bitumen only must be used.

When open boundary trap covers are specified, inspection shaft covers must be used, and an educt vent must be provided, unless otherwise ordered by the Engineer-in-Chief.

In all cases, more especially in city properties, the boundary trap must be kept as low as possible to provide for existing or future cellars.

When the connecting drain is considerably deeper than the depth at which the boundary trap will be required to be placed to provide for existing or future cellars or subsoil water, the boundary trap, instead of being connected directly to the connecting drain, may, if approved, be connected to a vertical extension from the same.

Water Supply.

21. Subject to the provision of section 438 of the *Water Act 1890*, that it shall not be compulsory upon the Board to supply any water to any person whomsoever—and to the power of the Board, under the said Act to from time to time make, alter, and repeal by-laws for determining the rates to be paid for water supplied to lands and tenements, water will be supplied by the Board for water-closets and other sanitary appliances on the following conditions, namely:—

Every owner of property who shall desire, or who shall have been ordered by the Board to provide sanitary appliances for his property and to connect the same with the sewers of the Board, must, prior to or at commencement of the work of making such connexion, provide piping approved by the Board for the conveyance of water, and cause the same to be joined to the most convenient water supply main or, with permission of the Board, to some pipe already joined thereto, which piping must be of capacity sufficient to convey to the flushing cistern of each water-closet upon the property enough water to fill such cistern within five minutes, and he shall cause such piping to be connected with such cistern prior to the completion of the work.

If the work of making such connexion be done by the Board, the cost of such piping and of so joining the same shall be charged to, and be paid to the Board by, such owner as part of the cost of making such connexion. But if the cost of the new water supply work exceed £3, such cost must be paid by the owner on completion of the work.

After completion of such connexion, or if the work be done by the Board from and after twelve months from date of such completion, such owner shall keep the said piping from becoming, whether by reason of corrosion or other cause, of insufficient capacity to convey to the flushing cistern enough water to fill the same within five minutes as aforesaid. And any such owner who shall fail or neglect to do so for more than seven days after having had notice in writing from the Board requiring him to have such piping cleansed, or otherwise rendered sufficient to fill such cistern within the said time, shall be liable to a penalty not exceeding Five pounds, and to a continuing penalty not exceeding One pound for every day during which such failure or neglect shall continue.

The entire length of the water supply piping from its connexion with the water supply main to the water-closet flushing cistern or other sanitary appliance must be, in the opinion of the Engineer-in-Chief or the Engineer for Water Supply, suitable in regard to material, condition, and capacity to convey a sufficiency of water for the sanitary requirements of the particular tenement.

If the Engineer-in-Chief or Engineer for Water Supply deem it necessary in any case, the piping to supply the water-closet flushing cistern must be separate piping from that which conveys water to the tenement for other purposes.

The piping to convey a supply of water to the tenement for sanitary uses shall not for the purpose of obtaining such supply be joined to the piping which conveys water to another tenement for general purpose.

In cases where, at the time of this by-law coming into operation, more tenements than one are supplied from one and the same service, the Engineer-in-Chief or the Engineer for Water Supply may assent to the extension of piping from the water-closet of one tenement to that of another tenement, provided that the water supply to each water-closet must be controlled by a separate stop-tap for each water-closet. But when any tenement so supplied with water shall cease to be so, and shall have for itself a separate supply of water for general purposes, the piping for supply of water to the water-closet must be disconnected from that furnishing such supply to the water-closet of any other, and must be connected with the pipe affording water supply to the tenement to which it appertains.

The Board if it see fit will give permission to so arrange in special cases that the water supply to more than one tenement may pass from the water main into a single pipe (herein called a "trunk service"), which must be laid in a street with branch piping therefrom to each tenement, and on each such branch there must be a stop-tap, but in any such case no such branch shall be fixed in excess of the number or of the diameter proportioned to the trunk service set forth in the subjoined table, namely:—

Diameter.	No. of 1-in.	No. of 1½-in.	No. of 2-in.
Trunk Service.	Branches only.	Branches only.	Branches only.
2-in.	—	—	3
1-in.	—	2	or 5
1½-in.	2	or 4	or 10
1½-in.	3	or 6	or 15
2-in.	6	or 12	or 30

When a house is supplied through meter, an independent service or an extension from the existing service, taken from the main side of the meter, will be allowed to the closets or urinals. Such independent service or extension must be so laid that, in the opinion of the Engineer-in-Chief or Engineer for Water Supply, there will be no risk of branches being taken from it for any other purpose. Or a check meter may be fixed on the closet service, and the water registered through it will not be charged for (unless the Board shall hereafter order otherwise), provided that there be no automatic flushing cistern fixed. The allowance of 10s. per closet, provided in By-law No. 8, will not be made in any of these cases.

All plumbers' notices for laying on water for water-closets or making any alterations when the tenement is supplied through meter must distinctly state whether such supply to the closets is or is not to pass through the meter.

No objection will be offered to connexion of water-pipes outside of the meter for the supply of water-closets and urinals, but in such case no rebate will be allowed under the conditions mentioned in the Water Supply By-law No. 8.

If at any time the water supply to a water-closet be connected outside of the meter, a special report must be made by the Engineer-in-Chief to the Board's Treasurer.

Water supply pipes to storage tanks for internal closets must be 3-in. diameter for tanks up to 20 gallons, and 4-in. for tanks of larger size, and must be provided with high pressure ball-tap.

Outlets from storage tanks must not be less than 3-in. when supplying one or two cisterns, and 1-in. for three to six cisterns. Whenever a larger number than six cisterns is fixed, the size of the outlet must be increased. The overflow from storage tanks must be 1½ inches in diameter, and a stop-tap must be fixed on the rising main to tank.

Whenever the height of the storage tank is not sufficient to allow of high pressure ball-taps being used, low pressure ball-taps must be fixed to three-gallon cisterns.

Where any deviation from these instructions is desired, an application in writing (in addition to the plumber's notice) must be made, and must distinctly state the reasons why such deviation is required, and pending the consent of the Board the work must not be undertaken.

In all internal water-closets a short but sufficient piece of lead pipe must be used between the flushing cistern and the supply pipe.

In other cases wrought-iron pipes may only be connected directly with the flushing cistern where cheapness is desired by the owner, and at his request.

Plumbing Rules—General.

22. Separate internal wastes shall be provided for each of the following classes of polluted waters, viz. :—

1. Dirty water from baths, pantry and china closet sinks, lavatories, and wash troughs, and other waters with a small proportion of soap and dirt.
2. Greasy water from kitchen and scullery sinks, where grease traps are required.

3. Soil water from closets, and other water containing faecal matter, and urinal water from housemaids' slop sinks, and public and private urinals.

Each one of these separate waste pipes, except for soil water, and in special cases where permission has been granted, urinal and slop-sink water must be connected with the drains through a gully or disconnector trap.

No material shall be used within the building for soil or waste pipes other than wrought or cast iron pipes with securely screwed or leaded joints, or lead pipes with wiped joints. Cement or putty joints, or tin or sheet-iron pipes, whether galvanized or not, shall not be used.

In all cases the upward extension from the soil pipe for ventilation must pass in as direct a manner as possible above, and, if necessary, through the roof.

The following are the minimum sizes of soil, waste, and vent pipes, and weights of lead, soil, waste, and vent pipes which must be used throughout, unless otherwise specially ordered by the Superintending Officer :—

Fitting.	Diameter of Waste Pipe.	Minimum Weight of Waste Pipe.	Diameter of Vent Pipe.	Minimum Weight of Vent Pipe.
One Wash Basin ...	1½ in. to 1½ in.	6 lbs.	1½ in.	6 lbs.
Row of Wash Basins ...	1½ in. to 2 in.	6 lbs.	1½ in. to 1½ in.	6 lbs.
Wash Basin Overflow ...	1½ in. to 1½ in.	6 lbs.	—	—
One Bath ...	1½ in. to 2 in.	6 lbs.	1½ in.	6 lbs.
Combined Waste for Baths ...	2 in. to 3 in.	6 lbs.	2 in.	6 lbs.
Bath Overflows ...	1½ in. to 2 in.	6 lbs.	—	—
Wash Tub ...	1½ in. to 2 in.	6 lbs.	1½ in.	6 lbs.
Set of Tubs ...	2 in.	6 lbs.	1½ in.	6 lbs.
Kitchen Sink ...	2 in.	6 lbs.	1½ in.	6 lbs.
Pantry Sink ...	1½ in. to 2 in.	6 lbs.	1½ in.	6 lbs.
Slop Sink ...	2½ in. to 3 in.	7 lbs.	1½ in. to 2½ in.	7 lbs.
One Urinal ...	1½ in. to 1½ in.	7 lbs.	1½ in. to 1½ in.	7 lbs.
Row of Urinals ...	1½ in. to 2 in.	7 lbs.	1½ in.	7 lbs.
Soil Pipes ...	4 in.	7 lbs.	2 in. to 3 in.	7 lbs.

All cast-iron pipes must be sound, free from holes and cracks, and coated with tar or asphaltum.

The following weights will be accepted as standards :—

2 inch diameter	5½ lbs. per lineal foot
3 " " "	8 " " " "
4 " " "	13½ " " " "

All wrought-iron pipes must be of approved standard weight and quality, and galvanized or coated to the satisfaction of the Board.

All fittings used in connexion with such pipes shall correspond with them in weight and quality. All junctions must be curved; right-angled junctions must not be made. Where lead pipe is used for waste or vent pipes, such pipes must not be lighter than of 6-lb lead, but where, in the opinion of the Board, a heavier weight may be required, such heavier weight as the Board shall desire must be used.

No cast-iron pipe laid in the ground or fixed above the ground at any height not exceeding 9 feet for the first 9 feet above the ground shall be less than the standard weights given in this

By-law, but the following modifications of the By-law will be allowed, viz. :—Cast iron for soil and waste pipes in other positions may be of the following minimum thickness :—

Cast-iron soil and waste pipes, minimum thickness, ½ inch.
Cast-iron ventilation pipes, 2-in., 3-in., and 4-in. diameter, minimum thickness, ⅝ inch.

Glass-enamelled pipe, if not under heavy pressure, may be ⅝ inch in thickness, without coating, for 3-in. or 4-in. soil or waste pipes.

Glass-enamelled pipes shall be measured without the enamel.

Where cast-iron soil or waste pipes are fixed outside a wall for upstairs fittings, the cast-iron pipes must be carried up above the level of the waste from the highest fitting attached to the pipe.

Sufficient inspection and clouting eyes must be provided in such positions on cast or wrought iron wastes as to be easy of access for proper cleansing of these wastes.

Where inspection-openings are provided to soil and waste pipes, preference must be given to insertion cloth washers before red lead.

All soil pipes shall be at least 4 inches diameter.

The soil and waste pipes and traps must, where practicable, be exposed to view at all times, for ready inspection and for convenience of repairing. When unavoidably placed within partitions or recesses of walls, soil or waste pipes must be covered with woodwork so fastened with screws as to be readily removed.

The arrangements of soil and waste pipes must be as direct as possible.

The following are the minimum gradients to be adopted :—

Sizes of Pipes.	Gradient.	Sizes of Pipes.	Gradient.
6-in.	1 in 60	1½ in.	1 in 18
4-in.	1 in 40	1½ in.	1 in 15
3-in.	1 in 30	1½ in.	1 in 12
2-in.	1 in 20	1 in.	1 in 10

No variation will be allowed except by permission of the Engineer-in-Chief.

The area of openings in gratings to any waste must not be less than will fully charge the waste pipe to which it is attached.

Sheet-iron wastes to wooden troughs must be connected with a lead outlet with lead flange wiped to it; the sheet-iron waste then to be slipped on and lead tacked to the lead outlet; wastes under galvanized-iron wash troughs without wood casing must be supported as directed by the inspector.

A main waste pipe, into which lavatories, baths, or kitchen sinks discharge, must be at least two inches (2 in.) in diameter.

Wastes in outhouses entirely disconnected from living rooms and kitchens may be of 22-gauge galvanized iron for baths and wash troughs.

Twenty-two gauge galvanized iron must be the minimum for all outside vents and for wastes outside of buildings, except for soil pipes, urinals, and slop sinks.

Vent pipes must not be less than two-thirds the diameter of the waste they ventilate, and no vent pipes are to be of less than the sizes herein specified.

External vent pipes of galvanized iron must be of not less gauge than the following :—

1½ in., 2 in., and 2½ in. diameter ...	22 gauge galvanized iron.
3 in. and 4 in. " " " "	20 " " " "
6 in. " " " "	18 " " " "

In all cases vent pipes, if inside a building, must be of cast or wrought iron or lead; dipped and folded galvanized iron vent pipes may be used where they are entirely outside a building, and these must be connected with the traps with brass ferrules, or other joints approved by the Engineer-in-Chief.

The various vent pipes may be branched into a soil or waste pipe of the same class above the level of the highest fixture. They may be combined by branching together those which serve several traps of the same class.

These vent pipes must always have a continuous slope, to avoid collecting water by condensation.

No vent pipe shall be used as a waste or soil pipe.

Galvanized sheet-iron vent pipes may be used inside stables or open sheds in place of cast-iron pipe, except where liable to blows from vehicles or to other external damage.

In all cases where the vertical stack of soil pipe provides for closets on second and higher floors, a short length of pipe with inspection opening cover clamped to a flange on the pipe with bolts and nuts and fixed close to the ground, must be fixed.

Lead pipes must not be used under ground floors where they are inaccessible or in the soil. In such places cast or wrought iron must be used.

McClellan's trap vent may be used only in special cases where it is impossible to prevent syphonage in any other way.

Anti-syphonage vent pipes must be carried above the eaves of the building, unless special permission to the contrary be granted by the Engineer-in-Chief. These vent pipes must be taken off the waste or soil pipe as near as possible to the trap.

When an additional branch is required to a vent pipe already fixed, a brass saddle-piece, bolted or soldered to the existing vent, must be used whenever it is possible.

Wastes from disconnected fittings (except urinals and slop sinks) need not be ventilated unless they exceed 12 feet inclined, or 18 feet vertical, in length (or their equivalent), and branch wastes to such fittings, if connected with a ventilated main waste, provided there be no other fittings attached to the line of waste, may be 12 feet in length without being ventilated, unless syphonage occurs in a trap, in which case air must be supplied to the waste of that trap.

Waste and soil pipes must have an approved fall.

Spacing of lead tacks must be arranged as nearly as possible thus :—

- 4-in. vertical lead pipes, 2ft. 6in. centres.
 - 4-in. horizontal lead pipes, 2 feet centres.
 - Less than 4-in. vertical lead pipes, 3 feet centres.
 - Less than 4-in. horizontal pipes, 2ft. 3in. centres.
- One pair of tacks fixed opposite is sufficient for lead flush pipes, but more tacks may be fixed if desired.

Where water might otherwise percolate to the floor, the sinks, baths, draining boards, and the like fittings must be flashed with lead or some other approved material.

Joints.—Plumbing.

23. All connexions of lead waste and vent pipes, shall be made by means of wiped joints.

All connexions of galvanized sheet-iron pipe to cast-iron pipe shall be made with molten lead and be tightly caulked.

Brass sockets or sleeves must be used in connecting galvanized sheet-iron to wrought-iron pipes and proper brass sleeves must be used in connecting galvanized sheet-iron pipes to lead pipes. Sheet-iron must not be soldered to lead.

In connecting galvanized wrought-iron waste pipes the ends of the pipes must be butted, smaller sockets being used, or the pipes must be sufficiently threaded to allow of the butting being done.

The flushing pipe from cistern to water-closet must be connected by a lead cap-piece.

Vent pipes must be connected to the vent horn of the water-closet trap by a lead cap-piece with red-lead packing.

Trapping Fittings.

24. Every water-closet, urinal, lavatory, slop sink, kitchen sink, bath, and every tub or set of tubs must be separately and effectively trapped, unless otherwise specially allowed by the Engineer-in-Chief.

Traps must be placed as near the fixtures as possible, and in no case shall a trap be more than 2 feet from a fixture, unless specially allowed by the Engineer-in-Chief.

Traps must be prevented from syphoning or the waste pipe leading from them must be ventilated by a special pipe taken from such a position that the vent pipe entrance will not be fouled by the discharge of the trap.

All lead-traps must be of drawn lead.

All traps must have a water-seal of at least half the diameter of the outlet pipe, but in no case less than 2½ inches.

The **P** form of traps, with wastes above the floor, and joints visible and accessible all round, must be used in all internal fittings, where possible.

The **S** form of traps with wastes under floors must not be used, except by special permission; and facilities for periodical inspection must be provided.

In detached closets and urinals, approved **S** forms in earthenware, with joints visible and accessible all round, may be used.

All fittings inside a main building must be trapped, and also in buildings directly attached to a main building with doors or windows opening directly into living rooms, work-rooms, or kitchen, unless otherwise allowed by the Engineer-in-Chief.

Fittings may remain untrapped when fixed on verandah of main out-building not enclosed in front, and where the waste does not exceed 3 feet in length.

Fittings fixed in out-buildings not used for living rooms or for cooking and not directly attached by openings with the main buildings may remain untrapped where wastes do not exceed 6 feet in length.

Every grease trap shall be fixed outside the premises whenever possible, and (if not portable) must be of stoneware and attached directly to the drain or disconnector trap.

The size of grease traps in ordinary cases must not be larger than the following:—Portable galvanized iron or copper about 21 inches in length; stoneware 27 inches in length.

Whenever a galvanized iron or copper grease trap is used inside a building, it must be fitted so as to be easily movable.

The size of grease trap outlets, except in special cases, must not be less than 3 inches for galvanized iron and copper, and 4 inches for stoneware.

All large grease traps, which are built in brick or slate, must have provision made for inlet and outlet ventilation.

Sinks in all such places as food-packing houses, butchers' shops, lard-rendering establishments, hotels, restaurants, boarding houses, and laundries, and wherever ordered by the Board, shall be provided with suitable approved grease traps.

Water-closets and Latrines.

25. Every water-closet in a building shall, where practicable, be constructed in such a position that one of its sides at least shall be an external wall, which external wall or walls shall abut immediately upon the street or upon a yard or garden or open space of not less than 100 square feet of superficial area measured horizontally at a point below the floor of such closet. Such water-closet shall not be constructed so that it is entered directly from any room used for the purpose of human habitation or used for the manufacture, preparation, or storing of food for man, or used as a factory, workshop, or workplace. Such water-closet shall be constructed so that on any side on which it would abut on a room intended for human habitation or used for the manufacture, preparation, or storage of food for man, or used as a factory, workshop, or workplace, it shall be enclosed by an air-tight partition of brick or other approved material extending the entire height from floor to ceiling.

Such water-closet must be provided with adequate means of constant ventilation by at least one air-brick built in an external wall of such water-closet, or by an air-shaft or by some other effectual method or appliance for ventilation.

Every soil pan shall be furnished with a separate flushing cistern of at least 3 gallons capacity, which shall be so constructed, fitted, and placed as to admit of the supply of water for use in such soil pan, without any direct communication with any service pipe upon the premises. A suitable apparatus must be provided for the effectual application of water to the basin of the water-closet, and for the effectual flushing and cleansing of such basin, and for the prompt and effective removal therefrom of any solid or liquid filth which may from time to time be deposited therein. Such water-closet shall be furnished with a basin of non-absorbent material of such shape, capacity, and mode of construction as to receive and contain a sufficient

quantity of water, and to allow all filth which may from time to time be deposited in such basin to fall free of the sides thereof and directly into the water received and contained in the basin.

Latrines, where they are allowed by the Engineer-in-Chief, or a group of soil pans may, by special permission, be supplied from one flushing tank of approved size; but soil pans on different floors must not be flushed from one tank. In houses occupied by different tenants in separate rooms or suites of rooms there must be a separate cistern to each soil pan. In no case will water-closet accommodation be allowed in the cellar or basement, except by permission of the Engineer-in-Chief. The use of water-closets of the description known as "pan closets" is prohibited. At any time after the date fixed by notice from the Board to the owner of any house, building, or ground, requiring him to connect the same with any sewer of the Board, or after such further time as shall be allowed by the Board for the purpose of such connexion, no privy closet, other than a water-closet approved by the Board, shall be used in such house or building, or upon such ground.

The soil pan and fittings thereto must be entirely open to inspection, and with no enclosures.

The flushing cistern must be fixed at such a height as will effectually flush the pan, but in no case must a cistern be fixed at a less height than 5ft. 9in. from the floor to the top of the cistern. Every cistern must be fixed so that the ball tap shall be accessible. Cisterns of all closets must have a separate stop tap to each, except in ranges of more than two closets, when one stop tap will be sufficient for every two cisterns in the range.

All water-closets on the ground floor inside a main building must be vented either by a soil vent pipe, or, if considered necessary by the Engineer-in-Chief, by back venting the trap.

In every case where there is more than one closet on an upstairs floor, provision must be made for ventilating in an approved manner to prevent syphoning, and so as to have a current of air continually passing through the soil pipes.

Where there are more than three closets on the ground floor special provision must be made to prevent syphoning.

When the branch from the closet to the main soil pipe is not more than 3 feet in length, and such closet is the only one attached to the soil pipe, the branch may be allowed to remain without any further venting.

To prevent fouling the pan, the closet seat openings must not be greater than 10½ in. x 9 in., and seats with holes so large as to cause fouling of the pan must not be used.

Where flap seats are required for water-closets, with separate pans and traps, either cast-iron brackets or iron frames must be provided, screwed to, or built into, the back wall of the closet, and supported in front by an iron support secured to the floor.

Water-closets will be allowed in basements only where, in the opinion of the Engineer-in-Chief, they cannot be otherwise placed, and in all such cases the owner must notify the Board in writing that he will take all risk of damage that may arise from fittings so placed.

Internal water-closets must be provided with storage tanks capable of holding 6 gallons of water for each occupant of the building. These tanks may be of 22-gauge galvanized sheet-iron or 24-gauge corrugated iron. The storage tanks may be placed in the closet room itself, on the roof over a flat or gutter, or in an accessible place between the ceiling and roof, in which latter case a galvanized sheet-iron or lead safe with overflow must be fixed under the storage tank. If the owner desire not to provide storage tanks, he must make a request in writing accepting all responsibility in the matter.

In wooden closet buildings the stumps, sole plates, bottom plates, and plinths must be of redgum.

On tiled, cemented, tar-paved, or asphalted floors closet pans must be secured to wooden plugs fixed in the floor.

In brick floors a wooden block (as near the size of the base of the pan as possible) to which the pan can be secured must be laid flush with the floor.

In hotels and lodging houses one water-closet must be provided for every ten lodgers the house can accommodate, placed in suitable positions for males and females separately; also, in hotels, urinal convenience must be provided for the public frequenting the premises.

Pedestal pans must be used wherever a combined water-closet, housemaid's slop-sink, and internal urinal is required, and in such cases must be provided with hinged tip-up seat.

A lead safe, of a suitable area, must be fixed under the pan.

Urinals.

26. Internal cradle urinals must be small, free from projecting ornament, and of non-absorbent material. The waste pipe shall be of pottery-ware, lead, or glass-enamelled or coated cast-iron, and, after being trapped, if necessary, must deliver out into the open air over a gully trap, or into a disconnector trap, except where special permission is given to do otherwise, keeping the waste pipe as short and free from bends as possible. The urinal must be provided with approved flushing apparatus. The floor under urinals must be covered with non-absorbent material.

In hotels, clubs, restaurants, theatres, and other public places, pedestal water-closet pans, capable of being used as urinals, with tip-up seats and suitable lead safes or enamelled slate or other approved water-troughs, shall be provided, either raised above the floor or sunk in an impervious floor under the range of urinals, and kept full of flowing water by approved flushing apparatus. The floors of the urinals must be tiled or paved, with a fall towards a drain against the wall or under the trough. The walls behind and screens between urinals must be of non-absorbent material, and of approved height; the screens must also be free from the floor for a portion of the width of the divisions. They must project at least 1½ feet, and be not less than 2 feet apart. Other forms of urinals will only be allowed if specially approved of by the Engineer-in-Chief.

The following materials will be considered impervious :—

- (1) For urinal walls: Tiles, brickwork rendered with Portland cement mortar, slate, marble, white or brown-glazed fire clay, salt-glazed stoneware, and enamelled cast-iron.
- (2) For urinal floors: Tiles, Portland cement mortar, slate, marble, asphalt, and sheet-lead.

The waste pipe from single urinals must discharge under the grating where floor or urinal disconnecting traps are used.

Outside urinals may discharge into open channels without further trapping, except that provided for the open channels.

Open channels must not be provided for urinals inside main buildings except where approved of by the Engineer-in-Chief, and where they have ample ventilation and light.

Wherever inside urinals are fitted with wastes and traps, and drippings may become a nuisance, provision must be made to prevent the nuisance by one of the following methods :—

- (a) By a urinal floor trap with the floor graded to the trap, when the floor is tiled, cemented, or covered with asphaltum.
- (b) By a suitable sunken tray, trapped and connected with the waste, when the floor is covered by lead.

Suitable provision in each case must be made for retaining the seal of the floor trap. The trapping of urinal and floor may be combined, but in the best classes of work a separate trap to each should be provided.

Flush pipes for automatic flushing cisterns generally must not exceed—

- | | |
|--|---|
| 1-gallon cistern, $\frac{3}{4}$ in. dia. | } With branches as directed by the Engineer-in-Chief. |
| 2 " " 1 in. dia. | |
| 3 " " 1½ in. dia. | |

The height of cisterns must be at least 7 ft. 6 in. from the floor to the bottom of the cistern. The cistern must be so fixed that the ball tap shall be accessible.

Automatic flushing cisterns must be fixed on public urinals, and be timed to discharge at least every twenty minutes. The use of automatic flushing cisterns is to be confined to railway stations and public conveniences. Pull and chain cisterns must be used in connexion with urinals in all other situations.

The discharge must be equal to 1 gallon for each urinal stall, except where otherwise allowed by the Engineer-in-Chief.

In a combination of two urinals, one 2-gallon cistern may be used.

A separate stop tap must be provided for each urinal cistern.

By permission of the Engineer-in-Chief, and provided the waste pipe be properly trapped and vented, urinal wastes may be connected directly to the drain if no soil pipe be convenient, or it would be expensive to lead them to a disconnector trap.

Housemaids' Slop Sinks.

27. The waste pipe from a slop sink must be independently carried out to the open air, with a quick fall, into a full-bore ventilated 2½-in. down pipe to the ground, where a gully trap or disconnector trap must take the waste to the drain, or into a soil pipe; and the sink must be tapped with 2½-in. seal and a brass cleansing screw under the water line, well opened out into a deep cone to receive the sink-basin. The trap must be fitted with a 1½-in. vent pipe. The sink must be of approved material. Draw-off taps must not be used directly over slop sinks, unless at least 18 inches above the sink. Slop sinks must be provided with approved flushing arrangements.

Wherever a slop sink is connected to a soil pipe it can be treated in the same way as a closet, except that it must be vented.

The discharge from a bath waste may be utilized for flushing a housemaid's slop sink, but nevertheless a flushing cistern must also be provided for the same purpose.

All insanitary slop sinks must be abolished.

Kitchen and Scullery Sinks or Troughs.

28. Unless where otherwise specially approved, kitchen and scullery sinks and troughs must discharge into the open air over a gully trap, or into a disconnector trap. The trap and waste pipes must be not less than 2 inches in diameter.

The brass strainer must be sunk to the level of the trough. The grating openings must be of ample size to fill the waste pipe full bore.

Where sinks abut against walls or partitions they must have suitable lead flushing of not less than 5-lb. lead.

When the distance between the outlets on troughs exceeds 21 inches and lead pipe is used, the pipe must be supported either by a lead tack wiped on the top of the pipe, or by a wooden block screwed to the bottom of the trough and clamped to the pipe. The pipe passing through the trough must have a lead flange wiped on.

Baths and Lavatories.

29. The waste pipe from a bath or set of lavatories must be at least 1½ inches diameter, trapped with a deep-siphon trap, with a cleansing screw provided with a 1½-in. vent pipe for the bath, and 1½-in. vent pipe for lavatory. The waste pipe must be carried separately to the open air, and delivered over a gully trap, or into a disconnector trap.

The waste pipe and trap from single lavatories newly placed must be at least 1½ inches in diameter, but the area of the grating must be sufficient for the water to effectually scour the waste pipe. The waste pipe must be as short as possible, and discharge over a gully trap or into a disconnector trap.

No tip-up basins shall be allowed to be connected with the sewers unless they are already in existence and are allowed to be retained as existing fittings. The waste pipe must be 2 inches in diameter.

From two to four lavatories must have at least a 1½-in. waste pipe; from five to eight, a 1½-in. waste; and from nine to twelve, a 2-in. waste.

In all internal ranges of lavatories separate trap ventilation must be provided. In ranges of lavatories in external buildings or rooms isolated from the main building the waste may be ventilated by a single pipe at its upper end.

Where it is necessary to fix new wastes to galvanized-iron baths, the bottoms of which are unsupported, efficient supports for the baths must be provided before the wastes are fixed.

Where traps to baths are fixed on the outside walls the trap must be in no case more than 3 feet from outlet of bath, unless with special permission of the Engineer-in-Chief.

Safts, Overflows, &c.

30. Unless where otherwise allowed by the Engineer-in-Chief, every lead safe under a water closet, urinal, lavatory, bath, refrigerator, sink, or other fixture, must be drained by a special pipe not directly connected with any waste pipe, soil pipe, drain, or sewer, unless it be trapped and ventilated. It must be provided at the outlet into the open air with flap valves of brass or other approved metal.

No steam exhaust, blow-off, or drip pipe shall be connected with a drain or sewer, or with any soil or waste pipe. Such pipes must discharge into the rain-water channels.

Whenever it is not intended to cover the entire floor of closet with lead, the roll or slip must not be brought forward so that the feet of the person using the closet may rest thereon.

The roll must be fixed vertically below the front of the upper part of the pan.

On special application of the owner, lead safes already in position may be retained as existing fittings.

It is not compulsory to fix a lead safe or other impervious material under any fitting on an upstairs floor except for a slop hopper, urinal, or water-closet used as a urinal. Lead safes are recommended however, under baths and slop sinks upstairs.

Existing bath floors must be regraded, if necessary, in the opinion of the Board's Inspecting Officer, and a proper waste must be fixed.

On ground floors when cisterns are fixed over tiled, tar-paved, or asphalted floors graded to drain outside of the room, the overflow may discharge on to them provided no damage is likely to arise therefrom.

Pipes draining lead safes must discharge into the open air only when the discharge will not cause any inconvenience or cause a nuisance. In all other cases the pipes must be brought to the ground surface or be arranged to discharge where they will not prove a source of annoyance or inconvenience.

Overflows from cisterns, wherever possible, must be taken through external walls, and must discharge inside the owner's property, but in exceptional cases permission may be given to discharge into a slop sink or other fitting or on to a lead safe which has a drainage pipe attached.

Pipes for bath safes must be of 1½ inches diameter, and those from closet and urinal safes must be of 1½ inches or 1½ inches as directed.

A brass grating must be fixed to the inlet of each safe pipe.

Existing Fittings.

31. Existing fittings and appliances which, in the opinion of the Engineer-in-Chief, shall be inoffensive, and which the owner may desire to retain unaltered, may by the consent of the Board remain unaltered until the Board shall otherwise order.

Existing fittings and appliances which are offensive must be removed at once, and all fittings not in accordance with this by-law must only remain at the distinct request of the owner, and must be removed at any future time if the Board so orders.

These requests are to be made by the owner or his agent on the form obtainable at the Board's office.

Gratings.

32. The entrances to exit pipes to all fixtures, except water-closets, shall be furnished with suitable permanently attached gratings.

Consent, Sanction, &c., of the Board.

33. Where the sanction, permission, authority, consent, approval, satisfaction, order, direction, opinion, indication, or notice of or from the Board is necessary, whether special, in writing, or otherwise, with regard to any act, matter, or thing mentioned in this by-law, the same may be given by and under the hand of the Chairman of the Board, or of the Engineer-in-Chief, personally or through an Inspecting Officer appointed under him, who severally shall be competent to give the same and on behalf of the Board to prescribe any conditions attaching thereto, and subject to and in accordance with which only the same shall be deemed to have been given. The giver of the same shall notify his having done so at the next following meeting of the Sewerage Committee of the Board, with a view to report thereof to the Board where necessary.

Variation of By-law.

34. No variation from this By-law will be allowed, except by the special approval of the Board obtained previously to the proposed variation being carried out.

Penalty.

35. Any person offending against any provision of this by-law, for violation of which no special penalty is hereinbefore prescribed, shall be liable for every such offence to a penalty not exceeding twenty pounds.

The foregoing By-law was made and passed by the Melbourne and Metropolitan Board of Works, and the Common Seal of the said Board was hereunto affixed the twentieth day of May, One thousand nine hundred and two, in the presence of

Land Act 1901.

FARM ALLOTMENTS AVAILABLE FOR APPLICATION UNDER CONDITIONAL PURCHASE LEASE.

WALMER ESTATE.

THE allotments mentioned in the Schedule hereunder will be available for application from Thursday, 17th July, to Saturday, 2nd August, 1902.

Every application must be made on the prescribed form, and have affixed thereto, as fee for registration, a duty stamp equivalent to the value of 5s. for each allotment applied for, and be lodged with a deposit equal to the first two instalments of purchase money prescribed for the most valuable allotment applied for, at the Receipt and Pay Offices, Horsham or Melbourne.

All applications so lodged on or before the above-mentioned date will be deemed to have been simultaneously made.

The applications received will be dealt with by a Special Local Land Board at Horsham, commencing 10 a.m. Wednesday, 13th August, 1902.

Conditional Purchase Lease.

Every conditional purchase lease will be dated the 1st day of July, 1902, and may be for such a term of years, not exceeding 31½, as may be agreed upon between the lessee and the Board.

The purchase money, with interest at 4½ per cent., must be paid by 63 or a lesser number of half-yearly instalments (including deposit), calculated according to any of the tables under Division 3 of Part I. of the *Savings Banks Act 1897 Amendment Act 1899*. Each instalment will include interest upon the balance of the purchase money remaining unpaid.

Every conditional purchase lease of an allotment will also contain the following conditions:—

- That the lessee or purchaser shall make substantial improvements on the land to the value of 10 per cent. of the purchase money payable therefor before the end of the third year from the date of lease, and to the value of a further 10 per cent. before the end of the sixth year from such date.
- That the lessee shall reside eight months during each of the first six years on the allotment. (Personal residence by the wife or any child not less than eighteen years of age of the lessee shall be considered personal residence by the lessee.)
- That the lessee shall not transfer, assign, mortgage, or sublet, or part with the whole or any part of the allotment within the first six years of the lease.
- Such other conditions and covenants not inconsistent with the *Land Act 1901* (Part IV.) as the Governor in Council may by regulation prescribe.

Plans and further information may be obtained from the Closer Settlements Branch, Lands Department, Melbourne.

GRAZING LANDS AVAILABLE.

PANYYABR SWAMP.

APPLICATIONS will be received by the Board of Land and Works up to Twelve noon on Friday, 15th August, 1902, for the occupation, with the right to fence, for grazing purposes only, of the following unappropriated portions of land, subject to the Regulations approved by the Governor in Council and also the subjoined special conditions, for the period of ten (10) months from 1st September, 1902, to 30th June, 1903, and six years thereafter, renewable annually.

Such applications will be publicly heard at a Local Land Board, at the Crown Lands Office, Hamilton, on Tuesday, 26th August, 1902, at 10.30 a.m., by E. Burgess, Esq., Land Officer, when applicants will be required to attend.

The applications, accompanied by the fee for the period from 1st September, 1902, to 30th June, 1903, and license fee of 5s., should be addressed to the Secretary for Lands, Melbourne.

Separate applications must be made for each lot, stating clearly the annual rental, but the highest or any application will not necessarily be accepted.

The areas are given as more or less, and all appropriated land (if any) within the boundaries is excluded.

Plans can be seen and information may be obtained at the Lands Office, Hamilton, the State school, Panyyabr, or at this office.

Every licence granted under section 187 of the *Land Act 1901* shall be subject to the conditions set forth in the schedule hereto and to such special conditions and payment in advance of such fee as the Minister may determine, and shall be issued by an officer of the Department of Lands and Survey duly authorized in that behalf.

Conditions:

1. The issue of this licence shall not prevent the land comprised therein, or any part or parts thereof, being sold, leased, licensed, alienated, or dealt with under any of the provisions of the Land Acts, except under the 187 section of the *Land Act 1901*, or being resumed by order of the Governor or Administrator of the Government of Victoria, with the advice of the Executive Council, for any of the purposes for which land may be reserved under section 10 of the *Land Act 1901*, or for mining purposes.

2. In case the said land, or any part thereof, should be sold, leased, licensed, alienated, dealt with, or resumed as aforesaid, the licensee shall not be entitled to any compensation other than that which the responsible Minister of the Crown for the time being administering the Land Acts may think fit.

3. This licence is subject to the rights of the holders of miners' rights or of mining leases now issued or hereafter to be issued to enter upon the allotment hereby licensed, and to search for gold, and to mine thereon, and to erect and occupy mining plant and

machinery, without making any compensation to the licensee, his executors, administrators, or assigns, for surface or other damage.

4. Subject to these conditions, the licensee shall be entitled to use the land for the purpose for which this licence has been granted, until such land, or any part thereof, has been sold, leased, licensed, alienated, dealt with, or resumed as aforesaid, and thereupon all the interest of the licensee therein shall cease and be determined.

5. No land comprised in roads from time to time surveyed and marked out within the boundaries of the land comprised in this licence shall be deemed within its operation.

6. This licence shall entitle the holder thereof, during the period for which it is granted, to use the land therein comprised for depasturing purposes only, but shall not confer any right to build thereon, or to cultivate or, without the permission of the Minister, fence any portion thereof, or construct a dam or tank.

6A. That in the event of the Minister granting permission to fence the whole or any part of this area, the licensee shall provide gates or slip panels in suitable places for the convenience of the public. No compensation will be allowed for fencing erected on boundaries of allotments alienated or in course of alienation.

That where improvements are authorized under section 189 of the *Land Act 1901* the licensee shall notify, on completion, that such improvements have been made, otherwise the work will not be recognised.

7. The interest in this licence shall not be transferred without the consent of the Minister, and the payment of a fee of Ten shillings.

8. The licensee shall be liable to forfeiture if the licensee commit a breach of or neglect to comply with these conditions.

9. The publication of a notice in the *Government Gazette*, purporting to declare that the Governor or Administrator, with the advice aforesaid, has forfeited this licence, shall be conclusive evidence that the licence is forfeited.

10. The ring-barking of the timber upon the land by the licensee is expressly forbidden, and he shall not be entitled to destroy or cut and take away any such timber.

11. Free access to water shall be kept open at all times for travelling and other stock and for persons desiring to take water for domestic purposes.

12. The licensee shall destroy all thistles on the land, and on the half width of the adjoining roads, and shall be responsible for the destruction of thistles under the *Thistle Act 1890* in like manner as holders of freehold lands.

13. The licensee shall keep the land free from vermin, and, should he fail to do so, the licence shall be liable to forfeiture.

14. This licence is issued subject to the right of saw-millers to graze on this area such horses and bullocks as are actually used in connexion with their licensed operations on this land.

TENDERS FOR GRAZING LANDS.

Tenders must be sent in on proper form, which can be obtained on application to the Lands Department, Melbourne, or any of the Survey Offices in the country.

Tenders must be placed in the Crown Lands Office Tender-box not later than Twelve noon on Monday, 28th July, 1902.

NOTE.—No tender will be accepted unless the fee for the period from 1st August, 1902, to 30th June, 1903, and fee of Five shillings for licence, are forwarded with the tender.

TENDERS will be received by the Board of Land and Works up to Twelve noon on Monday, 28th July, 1902, for the occupation, for grazing purposes only, of the following unappropriated portions of land, subject to the Regulations approved by the Governor in Council and also the subjoined special conditions.

Every licence granted under section 187 of the *Land Act 1901* shall be subject to the conditions set forth in the schedule hereto and to such special conditions and payment in advance of such fee as the Minister may determine, and shall be issued by an officer of the Department of Lands and Survey duly authorized in that behalf.

Conditions:

1. The issue of this licence shall not prevent the land comprised therein, or any part or parts thereof, being sold, leased, licensed, alienated, or dealt with under any of the provisions of the *Land Acts*, except under the 187th section of the *Land Act 1901*, or being resumed by order of the Governor or Administrator of the Government of Victoria, with the advice of the Executive Council, for any of the purposes for which land may be reserved under section 10 of the *Land Act 1901*, or for mining purposes.

2. In case the said land, or any part thereof, should be sold, leased, licensed, alienated, dealt with, or resumed as aforesaid, the licensee shall not be entitled to any compensation other than that which the responsible Minister of the Crown for the time being administering the *Land Acts* may think fit.

3. This licence is subject to the rights of the holders of miners' rights or of mining leases now issued or hereafter to be issued to enter upon the allotment hereby licensed, and to search for gold, and to mine thereon, and to erect and occupy mining plant and machinery, without making any compensation to the licensee, his executors, administrators, or assigns, for surface or other damage.

4. Subject to these conditions, the licensee shall be entitled to use the land for the purpose for which this licence has been granted, until such land, or any part thereof, has been sold, leased, licensed, alienated, dealt with, or resumed as aforesaid, and thereupon all the interest of the licensee therein shall cease and be determined.

5. No land comprised in roads from time to time surveyed and marked out within the boundaries of the land comprised in this licence shall be deemed within its operation.

6. This licence shall entitle the holder thereof, during the period for which it is granted, to use the land therein comprised for depasturing purposes only, but shall not confer any right to build thereon, or to cultivate or, without the permission of the Minister, fence any portion thereof, or construct a dam or tank.

6a. That in the event of the Minister granting permission to fence the whole or any part of this area, the licensee shall provide gates or slip panels in suitable places for the convenience of the public. No compensation will be allowed for fencing erected on boundaries of allotments alienated or in course of alienation.

That where improvements are authorized under section 189 of the *Land Act 1901* the licensee shall notify, on completion, that such improvements have been made, otherwise the work will not be recognised.

7. The interest in this licence shall not be transferred without the consent of the Minister, and the payment of a fee of Ten shillings.

8. The licence shall be liable to forfeiture if the licensee commit a breach of or neglect to comply with these conditions.
9. The publication of a notice in the *Government Gazette*, purporting to declare that the Governor or Administrator, with the advice aforesaid, has forfeited this licence, shall be conclusive evidence that the licence is forfeited.

10. The ring-barking of the timber upon the land by the licensee is expressly forbidden, and he shall not be entitled to destroy or cut and take away any such timber.

11. Free access to water shall be kept open at all times for travelling and other stock and for persons desiring to take water for domestic purposes.

12. The licensee shall destroy all thistles on the land, and on the half width of the adjoining roads, and shall be responsible for the destruction of thistles under the *Thistle Act 1890* in like manner as holders of freehold lands.

13. The licensee shall keep the land free from vermin, and, should he fail to do so, the licence shall be liable to forfeiture.

14. This licence is issued subject to the right of saw-millers to graze on this area such horses and bullocks as are actually used in connexion with their licensed operations on this land.

Special Conditions.

1. The period of occupation will be for eleven months—from 1st August, 1902, to 30th June, 1903.

2. The fee for the period from 1st August, 1902, to 30th June, 1903—for which the licence will be issued, and fee for licence—must accompany the tender, otherwise the offer of the next highest tenderer who complies with this condition may be accepted.

3. Tenders to be for so much per lot and block per annum.
4. Separate tenders must be lodged for each block.

5. Tenders to be indorsed—"Tender for Lot 1, Block 2026," or "Lot 2, Block 4986," or "Lot 3 Block 6946," as the case may be.

6. The highest or any tender not necessarily accepted.

7. Tenderers must give their full name and ordinary postal address.

8. The areas are given as more or less, and all appropriated, alienated, or licensed land (if any) within the boundaries is excluded.

Plans can be seen and information may be obtained in this office.

M. K. McKENZIE,
Commissioner of Crown Lands and Survey.

The births of 968 children, viz., 513 boys and 455 girls, were registered in Greater Melbourne during the month of June. The number was the lowest recorded for the month since 1884, and 217 below the average of the month during the previous ten years, and 298 below it if allowance be made for the increase of population.

The deaths registered in June numbered 582, viz., 320 of males and 262 of females; the births thus exceeded the deaths by 386, or 66 per cent., as against 66 per cent. in June, 1901, and 102 per cent. according to the average. The number was, it will be noticed, the lowest recorded for the month during the previous ten years, except 1894, 1899, and 1900. It was also 6 below the average of June during that period, and 46 below it, allowing for the increase of population.

To every 1,000 of the population of the district the proportion of births registered was equivalent to 23.48, and of deaths registered to 14.12 per annum, as compared respectively with averages of the same month in 1901 of 24.68 and 14.90, with averages of the month during the last ten years of 29.71 and 15.27, and with averages of the year 1901 of 24.85 and 15.09.

The highest temperature in the shade recorded at Melbourne Observatory during the month was 60.6° on the 30th, and the lowest was 35.3° on the 29th and 30th. The mean temperature of the month (48.5°) was 1.2° below the average. The greatest range of the thermometer in any one day (25.3°) took place on the 30th, and the least range (5.6°) on the 1st. The mean daily range was 13.8°. The highest atmospheric pressure recorded was 30.512 inches on the 30th, and the lowest was 29.362 inches on the 9th. The mean atmospheric pressure (30.067 inches) was slightly above the average.

Rain fell on fourteen days, the amount being 2.70 inches, which was about seven-tenths of an inch higher than in June, 1901, and three-fifths of an inch above the average of the previous ten years.

Fog occurred on four days during the month.

The mean humidity of the month was 73.6.

Males contributed 55 per cent. and females 45 per cent. to the mortality of the month. Children under five years of age contributed 20 per cent. to that mortality, as against 20 per cent. in June, 1901; 19 per cent. in June, 1900; 22 per cent. in June, 1899; 27 per cent. in June, 1898; 25 per cent. in June, 1897; 25 per cent. in June, 1896; 21 per cent. in June, 1895; 28 per cent. in June, 1894; 35 per cent. in June, 1893; and 27 per cent. in June, 1892.

The deaths of infants under twelve months numbered 77, as compared with 91 in June, 1901. The rate of infantile mortality was 80 per 1,000 births registered in the month under review, as compared with 91 in June, 1901; 71 in June, 1900; 75 in June, 1899; 82 in June, 1898; 93 in June, 1897; 87 in June, 1896; 72 in June, 1895; 85 in June, 1894; 95 in June, 1893; and 84 in June, 1892.

Eighty-three persons—as against 65 in June, 1901—whose deaths were recorded during the month had attained or passed the age of 75 years. Of these, a gentleman, aged 75, died of diarrhoea; two females, each aged 75, of gout and cancer respectively; a male of no occupation, aged 75, of cerebral hemorrhage; a pensioner, aged 75, of valvular disease of the heart; a painter, aged 75, of aneurism; a merchant, aged 75, of heart disease; two females, each aged 75, of bronchitis and Bright's disease respectively; an ex-public servant and a female, each aged 76, of insanity; a labourer, aged 76, of endocarditis; a gentleman, aged 76, of pericarditis; a female, aged 76, of cirrhosis of the liver; a labourer, aged 76, of uræmia; a labourer, aged 77, of phthisis; a grocer, aged 77, of pneumonia; two females, aged 77 and 78 respectively, of chronic nephritis; a minister, aged 79, of dilatation of the heart; a carpenter, aged 79, of enteritis; a news-vendor, aged 79, of atheroma; a fisherman and two females, each aged 80, of pneumonia; a carpenter, aged 80, of enteritis; a clergyman, aged 80, of ulceration of the stomach; a female, aged 80, of cirrhosis of the liver; a brewer, aged 81, of cancer; a female, aged 81, of cerebral hemorrhage; a male of occupation unknown, aged 81, of hemiplegia; a female, aged 81, of locomotor ataxy; an overseer, aged 81, of bronchitis; a female, aged 82, of apoplexy; the Consul for Belgium, aged 82, of softening of the brain; a gentleman, aged 82, of valvular disease of the heart; a female, aged 82, of senile gangrene; a farmer, aged 82, of bronchitis; three females, each aged 83, of hemiplegia, heart disease, and bronchitis respectively; a labourer, aged 83, of chronic nephritis; a pensioner, aged 84, of lung disease; a female, aged 85, of paralysis; a merchant, aged 85, of heart disease; a female, aged 86, of valvular disease of the heart; a cook (female), aged 87, of senile gangrene; a female, aged 89, of paralysis; a clergyman, aged 90, of cerebral effusion; a farmer, aged 100, of bronchitis; a carpenter and a painter, each aged 75, a sawyer, a stonemason, and a wheelwright, each aged 76, a bootblack, a male of no occupation, and a female, each aged 77, a male of no occupation and a female, each aged 78, three females, each aged 79, a cabinetmaker, a labourer, and a female, each aged 80, three females, each aged 82, a female, aged 83, a cutter and two females, each aged 84, a farmer and two females, each aged 85, a female, aged 88, a gentleman, aged 88, two females, aged 93 and 94 respectively, a gardener and a female, each aged 95, and a farmer, aged 96, of old age.

Twenty-eight of the deaths recorded during the month—as compared with 57 in June, 1901—were from external causes, of which 21 were set down to accident, and 7 to suicide. The following are the particulars of the accidental deaths:—A male, of unknown occupation, aged 35, was passed over by a railway train; a jockey, aged 30, died of internal injuries, and a male of no occupation, aged 36, of injuries to the head, the result in each case of a fall from a horse; a brassfounder, aged 29, of injuries consequent on a fall from a bicycle; a sergeant of police, aged 50, of fracture of the skull, caused by a fall whilst in a fit; a female, aged 43, of effusion of blood on the brain, the result of a fall; an engineer, aged 41, of injuries consequent on being caught in machinery; a sailor, aged 21, of gunshot wounds; a female child, aged 4, of burns; five persons were "found drowned," viz., a marine dealer, aged 55, and a female, aged 40, in the River Yarra; a labourer, aged 42, in the Saltwater River; and a grocer, aged 36, and a commission agent, aged 62, in Hobson's Bay; an ex-civil servant, aged 66, and a female child, aged 7, were suffocated whilst under chloroform; 2 new-born female infants, 2 male children, aged 2 months and 1 year respectively, and a female child, aged 3 months, were suffocated. The suicidal deaths were those of a clerk, aged 37, and a mattress-maker, aged 48, who shot themselves; a brassfounder, aged 57, who cut his throat; a female, aged 65, who drowned herself; a clothier and a journalist, each aged 52, and a labourer, aged 61, who hanged themselves.

One hundred and sixty-four deaths, or 28 per cent. of the whole, took place in public institutions, viz.:—

N.B.—The figures in parentheses represent the numbers in the corresponding month of the preceding year.

As compared with the corresponding month of the preceding year, the mortality from zymotic, parasitic, and dietetic diseases remains nearly stationary, but there was an increase of 7 deaths under constitutional and 12 under developmental diseases; whilst there was a decrease of 34 under local diseases, 9 under the head of violence, and 3 under ill-defined causes. Under the constitutional class, deaths from tubercular meningitis rose from 3 to 6, and those from phthisis from 55 to 66. Under the developmental class, deaths from old age rose from 21 to 36. In the local class, deaths from diseases of the respiratory system increased by 14, and those from diseases of parturition by 5; on the other hand, deaths from diseases of the nervous system diminished by 19, those from diseases of the circulatory system by 12, those from diseases of the digestive system by 20, and those from diseases of the urinary system by 6.

The following is a statement of the deaths set down to diphtheria and typhoid fever in each month of the years 1892 to 1901, and the first six months of 1902, from which may be traced the rise and fall of the mortality at various periods of the year. It will be noticed that the mortality from typhoid fever usually attains its maximum in March, and is at a minimum from July to November. It will also be noticed that the mortality from both causes during the month was below the average.

ROBT. S. BRAIN,
Government Printer.

Melbourne, 23rd July, 1902.

THE VICTORIA GOVERNMENT GAZETTE.

SUBSCRIPTIONS.—The Subscription, including Postage, is £1 6s. per annum, or 6s. 6d. per quarter, payable in advance.

Subscriptions are required to commence and terminate with a month.

A lesser period than three months cannot be subscribed for.

Subscribers do not receive the Acts of Parliament with the Gazette.

ADVERTISEMENTS are charged at the rate of SEVENPENCE per line throughout.

The Title (£5 Reward, Dissolution of Partnership, &c.) forms one or more lines, as a heading.

On an average, ten words make a line, but for the description of a brand consisting of more than one letter, &c., placed perpendicularly, thus, B, each additional letter under the first is charged as a line.

Every Signature must likewise be counted as a line.

The final words of a paragraph, though only a portion of a line, must be counted as one line.

Signatures (in particular) and Proper names must be written very plainly in the text: ONE SIDE ONLY of each slip of paper should be WRITTEN UPON.

ALL DOCUMENTS illegibly written will be returned unpublished, and, where brands occur unprovided for by the ordinary letters of the alphabet, a worded explanatory description must be furnished.

The GOVERNMENT GAZETTE is published on WEDNESDAY EVENING in each week, and Notices for insertion must be received by the Government Printer on or before Two o'clock of the day preceding the day of publication.

Single copies of the GOVERNMENT GAZETTE are Sixpence each.
