THE Shepparton Urban Waterworks Trust (hereinafter called "The Trust"), in pursuance and exercise of the powers and authorities conferred by the Water Acts and of all powers enabling them in this behalf, doth hereby make the By-law following for its waterworks district:—

Connexions with Trust's Mains.

(1) Except with the consent of the Trust, one service pipe only for domestic supply to each tenement shall be permitted and not more than one house or tenement shall be supplied from a single water service. The Trust may, in special cases, consent to two or more houses or tenements being supplied from one water service, but in such cases the sub-service shall be so arranged that the supply to each house or tenement shall be independent of the supply to the remaining houses, and be controlled by a stop-cock on such service.

(2) No private service shall be extended, except with the consent of the Trust.

(3) Upon any person giving notice of his desire to lay a pipe, to connect with and tap the pipes of the Trust, he shall be informed on behalf of the Trust whether it is or is not desired that such tapping should be made by an officer of the Trust, and if it be so desired such person shall not tap any such pipe, but shall provide for and bear the cost of all labour and material necessary for such connexion, and for the restoration of the ground to the satisfaction of the local authority, and be liable for the consequences of failure in so doing, and shall pay in advance to the Trust the expense of such tapping, including the stop-cock and ferrule at such rates as shall from time to time be fixed by the Trust.

(4) All service pipes laid in the ground on private property shall be laid at a depth of not less than 10 inches below the surface. The portions of the service pipe laid along or across any public street, lane, or right-of-way, or where it may be exposed to wheel traffic, shall be laid not less than 24 inches below the surface of the ground.

(5) Connexions with the Trust's mains shall (except where otherwise directed) be made with proper stop-cock ferrules to which, for iron services, a length of not less than 3 feet of lead pipe must be attached. For houses, rates at £20 per annum and under, the bore of such service pipe shall not exceed $\frac{1}{2}$ inch, and for houses rated at over £20 per annum the size of such service pipe shall not exceed $\frac{3}{4}$ inch, unless permission for a larger service shall have been received in writing from the Trust.

(6) The maximum tapping allowed (except by special permit of the Trust) for each size of main shall be as follows:—

For 1½-inch and 2-inch pipes, $\frac{1}{4}$ -inch tapping, with approved clip.

For 3-inch and 4-inch pipes, $\frac{1}{2}$ -inch tapping.

For 5-inch and 6-inch pipes, 1-inch tapping.

For 8-inch pipes, 1½-inch tapping.

For 9-inch pipes, 1½-inch tapping.

For over 9-inch pipes, 2-inch tapping.

(7) A high pressure screw-down stop-cock, properly secured and covered with an approved cast-iron top shall be fixed on each water service in some readily accessible position 2 feet inside the street boundary line of the land into which any such service pipe shall be laid; but if there be a building abutting on the boundary line the stop-cock with the covering aforesaid shall be placed between the kerb and the boundary.

Materials for Private Services, &c.

(8) Lead piping of the following weights:—

For piping $\frac{1}{4}$ inch diameter, weight 6 lb. per yard;

For piping $\frac{3}{8}$ inch diameter, weight 9 lb. per yard;

For piping 1 inch diameter, weight 12 lb. per yard;

For piping 1½ inch diameter, weight 20 lb. per yard;

and galvanized wrought-iron piping, of approved quality only, will be allowed for external and internal services.

(9) The quality of the material required in laying private services shall be as follows:—

(a) The whole of the pipes, tees, thimbles (excepting those connecting the service pipes and mains), bends, reducing couplings, plugs, and the like, shall be of best galvanized wrought iron.

(b) All pipes and pieces shall be true in sectional form, straight longitudinally, clear in bore and properly coated throughout, and of equal strength and thickness throughout the entire body of same.

(c) All ends of pipes, bends, and the like shall be properly and truly threaded and capable of being properly screwed into thimbles, tees, or fittings.

(d) The whole of the pipes, tees, bends, cocks, and fittings shall be sound and free from all defects and of strength to bear with safety the maximum hydrostatic pressure to which they may be subject, and if required by the Trust, shall be tested.

(10) No person shall use any tap, stop-cock, bib-cock, ball-cock valve, closet cistern, service box, waste-not regulator, bath-tap, or valve or other fitting in connexion with a supply of water of the Trust which is not of the best quality and approved by the Trust.

(11) No person shall use any stop or bib-cocks which are not screw-down high-pressure cocks, made of hard brass or gun-metal and in every respect of the best quality and workmanship and approved by the Trust.

(12) All connexions between lead and iron pipes shall be made with brass union couplings.

(13) All joints connecting lead pipes shall be "wiped joints," and in no case will "bolt" or "copper bit" joints be allowed on water service pipes, either in the interior or on the exterior of any building or tenement, on pain of cancellation of licence of the plumber who, by himself or his workman, shall break these regulations.

(14) No person, whether licensed as hereinafter set out or not, shall, without the written consent of the Trust, connect any service pipe or branch service pipe with any steam boiler for the purpose of feeding or supplying the same with water, without first affixing a self-acting valve for preventing the pressure of the steam reversing or affecting the dial of the meter.

(15) No person shall use any cistern or tank that is not provided with an equilibrium ball valve, and the overflow pipe laid and fixed in a suitable manner open to inspection and in a position approved by the Trust.

(16) No person shall construct or use any urinal or water-closet fitting not approved by the Trust, nor unless the same be supplied with water from the service pertaining to a tenement through a proper closet cistern or service box fitted with approved waste preventing apparatus. No person shall fix or use any service pipe which communicates directly or indirectly with the basin or trap or otherwise than with the cistern of a urinal or water-closet. Urinals shall be provided with 2-gallon and closets with 3-gallon cisterns.

(17) All baths, sinks, lavatory and other basins, closets and urinals served from the Trust's mains shall be of approved sanitary construction, and mounted to the satisfaction of the Trust.

(18) No bath shall be allowed which has a holding capacity when full of more than 100 gallons, except with the permission of the Trust. Overflow pipes to baths will not be permitted, except where the supply is by measure.

(19) All water troughs supplied from the pipes of the Trust shall be lined with metal, so as to be watertight, and shall have proper and efficient fittings for supplying them automatically, and for preventing overflow.

Licensing of Plumbers.

(20) Before any person shall affix any service pipe to any pipe of the Trust, or alter, repair, or in any manner interfere with any pipe of the Trust, or any service pipe, cock, or fitting connected with the pipes of the Trust, he shall obtain from the Trust a licence in that behalf to execute such works, and any unlicensed person affixing, altering, repairing, or in any manner interfering with any such pipe, service pipe, cock, or fitting as aforesaid shall be guilty of an offence.

(21) Each licence shall be for the period ending 31st December next ensuing after the issue thereof, but may be renewed by the Trust at its discretion from time to time in each case to the following 31st December. The Trust shall have power at any time to cancel a licence in the event of the holder thereof performing his work in an unsatisfactory manner, or committing any breach of the *Water Act 1915* or of this By-law; and in such matters the Trust shall be sole judge. For each original licence the licensee shall pay to the Trust a fee of Ten shillings, and for each renewal Ten shillings.

(22) Before any such licence shall be granted by the Trust, the person applying for same shall satisfy the Trust that he is a competent plumber, and that he is thoroughly conversant with the provisions of the By-laws of the Trust relating to water supply, and with the *Water Act 1915* so far as it applies to town supplies. The Trust may, if it so sees fit, refuse to grant such licence.

(23) Each licensed plumber, before commencing any new work, shall obtain the consent of the Trust, and shall report to the Trust Secretary the completion of any new work, extensions, or repairs in connexion with any service, within twenty-four hours of effecting same.

Wherever washers are necessary for meter connexion coupling leather washers shall in all cases be used.

(b) If any meter in use cease registering, or be reported by a duly authorized officer of the Trust as out of repair, or registering inaccurately, the Trust will estimate and charge for the water consumed during the period such meter was not in working order and until it is repaired and refixed, either by taking an average of the quantity used during the previous quarter or during the corresponding period of the previous year, on the basis of subsequent consumption after repairing, or the Trust may insert a check meter on the service pipe and charge upon estimates from the registering thereof.

(c) The Trust will, if it so think fit, but not otherwise, let for hire water meters, the rent of which shall be at the rate per annum of—

For $\frac{1}{4}$ -inch meter ...	Six shillings.
For $\frac{1}{2}$ -inch meter ...	Seven shillings.
For 1-inch meter ...	Eight shillings.

For any meter of larger size than 1 inch the rent per annum shall be at the rate of 10 per centum upon the cost of such meter, fixed complete.

Such hired meters shall be kept in repair at the cost of the Trust, except as to external injuries, the cost of repairing which shall be borne by the hirer.

(d) Meters, other than such as are hired from the Trust, will be tested on delivery thereof at the office of the Trust; a fee of Five shillings shall be charged for each test.

(e) In the event of the hirer being dissatisfied with the registering of a meter hired from the Trust, he may, by notice in writing, require the Trust to cause such meter to be removed and tested; and, together with such notice, shall forward a sum of Ten shillings, which, if the meter be found to register correctly, shall be applied in paying the cost of the removing, testing, and replacing, and the balance, if any, shall be returned to him; but if such meter be found to fail to register, or be found to register incorrectly, it shall be repaired and replaced, or another meter shall be placed instead thereof, at the cost of the Trust, and the amount deposited by the hirer shall be returned to him. Any person so hiring a meter from the Trust, who shall cease to occupy the premises on which such meter is fixed without having previously given, in writing, at least six days' notice to the Trust of his intention to do so, shall be guilty of an offence.

Waste or Misuse of Water.

(26) No person supplied with water by the Trust shall wilfully or negligently allow the same to run to waste.

(27) No person receiving water from the Trust shall, without the written permission of the Trust, take or carry away such water or shall sell the same to any other person.

(32) No person shall use water in any manner for irrigation purposes (except where the supply is by meter).

(33) No person shall use any water on, nor allow any water to run on any land, garden, plantation, or vegetation, wherever growing, otherwise than by means of a garden hose, nor at any time, other than between the hours of Seven (7) o'clock a.m. and Nine (9) o'clock p.m. during the months of November, December, January, February, and March, or between the hours of Seven (7) o'clock a.m. and Eight (8) o'clock p.m. during the other months of the year.

(34) Every person supplied with water shall keep the pipe or pipes on the premises occupied by him disconnected and free from any hose pipe or other conduit during the times the use of water is forbidden under this By-law.

**Boiler Inspection Act 1915 (No. 2621).
REGULATION FOR THE INSPECTION AND TEST OF
BOILERS.**

*At the Law Courts, Melbourne, the thirtieth day of
November, 1926.*

PRESENT:

His Excellency the Lieutenant-Governor, as Deputy for His
Excellency the Governor of the State of Victoria.

Mr. Eggleston
Mr. McGregor

Mr. McDonald.

WHEREAS by section 45 of Act No. 2621, *Boilers Inspection Act 1915*, it is enacted that the Governor in Council may make Regulations prescribing the mode in which the pressure which boilers are calculated to sustain is to be ascertained, and the method of reckoning the horse-power of boilers and prescribing the appurtenances, fittings, and connexions proper for boilers and the placing of identification stamps thereon; prescribing the forms of notices to be given under this Act in any case where the same is not expressly provided for; and generally for carrying this Act into execution: Now therefore His Excellency the Lieutenant-Governor, as Deputy for His Excellency the Governor of the State of Victoria, by and with the advice of the Executive Council thereof, in pursuance of the powers conferred by the said section of the said Act and all other powers him enabling in that behalf, doth hereby make the following Regulation, and furthermore that such Regulation shall be deemed to be in lieu of Regulation No. 1 previously approved by the Governor in Council on 28th March, 1916, which reads thus:—"The pressure which boilers are calculated to sustain is to be ascertained by applying the British Board of Trade Rules relating to Steam Boilers," and shall take effect from the date of publication hereof in the *Government Gazette*.

REGULATION No. 1.

The pressure which boilers are calculated to sustain is to be ascertained by applying the British Board of Trade Rules relating to Steam Boilers, excepting in the case of Tubes and Tube Plates, to which the following rules shall apply:—

(1) Parts to be Stayed.—(a) All flat tube plates, except those of loco-type boilers and of other boilers in which the total gross area of surface occupied by tubes in any one plate, being the sum of one or more areas enclosed within lines touching the outsides of the outer rows of tubes, does not exceed 7 square feet, shall be stayed within the nests of tubes except as provided in the Board of Trade Rules for Water Tube Boilers.

(b) The parts of tube plates which lie outside the nests of tubes shall be stayed or supported wherever the size of the area of plate subject to steam pressure necessitates staying or support, either by marginal stay tubes or other means.

(c) Where stay tubes are required they shall be strong enough to support the load due to the steam pressure on the plate without taking account of any aid from the plain tubes contained in the areas.

(d) The stiffness of the tubes, plates, and pitch of stays within the nests of tubes where stay tubes are required, and where marginal stay tubes are required in support of blank spaces adjacent to or between the nests, shall be determined by flat plate rules under Board of Trade Rules.

The requirements for stay tubes shall be as specified in Board of Trade Rules.

(e) Tube plates within the nests of tubes, whether fitted with stay tubes or not, shall comply with requirements of paragraph (2) in regard to thickness and cross section between tubes.

(2) Minimum Thickness and Cross Section.—To provide a secure attachment for plain tubes in the tube plates, the thickness and cross section of the plate between the tube holes shall not be less than—

Steel tube plate—

$$.125D + .2 = \text{minimum thickness in inches.}$$

$$.17D + .025 = \text{minimum cross section in square inches.}$$

Copper tube plates—

$$.2D + .4 = \text{minimum thickness in inches.}$$

$$.527D - .263 = \text{minimum cross section in square inches.}$$

D is the diameter in inches of the tube at the part of attachment to tube plate.

(3) Holding Power of Plain Tubes.—(a) Where tube plates are not specially stayed in nests of tubes, the working pressure, based on the holding power of the tubes, shall not exceed that found by the following formula:—

$$W.P. = \frac{C \times D}{A}$$

D is the diameter of tube at the part of attachment to tube plate in inches.

A is the area in square inches of tube plate supported by each tube, which generally may be taken as the product of the horizontal and vertical pitches of the tubes less the area of the tube itself.

C = 470 for tubes expanded into parallel holes in steel or iron tube plates.

C = 530 for tubes expanded into taper holes in steel or iron tube plates.

For copper tube plates or copper or brass tubes the appropriate co-efficient should be reduced 20 per cent.

Where the thickness and cross section of the tube plates are less than the minimum prescribed in paragraph (2), the appropriate co-efficient shall be reduced in proportion to the deficit.

Where no stay tubes are fitted the tubes at the fire-box end shall be beaded over or bell-mouthed.

(b) In the unstayed tube plates of loco-type boilers and in other tube plates in which stay tubes are not required, the support afforded by the plain tubes shall not be taken to extend beyond the lines enclosing the outer edges of the tubes. Parts of flat plate outside this line shall either lie in the plate margin or be separately supported. No account need be taken of the stiffness of tube plate in the nests of tubes when the above conditions are fulfilled.

Ordinarily the requirements of this clause are applicable only to expanded smoke and water tubes in flat continuous tube plates containing more than one row of tubes. See Board of Trade Rules for Water Tube Boilers.

(4) Tube Plates, other than Ends, of Vertical Boilers Forming Parts of Outer Shell.—(a) When vertical boilers have a nest or nests of horizontal tubes so that there is a direct tension on the tube plates due to the vertical load on the boiler ends, or to their acting as horizontal ties across the shell, the thickness of the tube plates and the spacing of the tubes shall be such that the section of metal taking the load is sufficient to keep the stress within that allowed on the shell plates.

(b) Each alternative tube in the outer vertical rows of tubes shall be a stay tube. The tube plates between the stay tube shall be in accordance with the rules for tube plates, and in addition, considered as part of shell, the maximum working pressures—

$$W.P. = \frac{17.24 (t - 2) \times (P - D) + S}{R \times P}$$

T is the thickness of the tube plate in 32nds of an inch.

P is the vertical pitch of the tubes in inches.

D is the diameter of the tube holes in inches.

S is the minimum tensile breaking strength of the tube plate in tons per square inch, or whatever is allowed for them.

R is the radial distance of the centre of the outer row of tube holes from the axis of the shell in inches.

(5) Copper Tubes.—Copper tubes up to 1 inch in external diameter may be used for small boilers; such tubes shall not be less than 12 S.W.G. (.104 inch) thick.

(6) Brass and Copper Tubes.—The thickness of tapered brass and copper smoke tubes for locomotive boilers shall, in the case of tubes of an external diameter of 1½ to 1¾ inches inclusive, be not less than 12 S.W.G. (.104 inch) at the smoke-box end and 10 S.W.G. (.128 inch) at the other; and in the case of tubes of an external diameter of 2 to 2½ inches inclusive, the thickness at the smoke-box end shall not be less than 11 S.W.G. (.116 inch), and at the other end not less than 9 S.W.G. (.144 inch).

And the Honorable George Louis Goudie, His Majesty's Minister of Mines for the State of Victoria, shall give the necessary directions herein accordingly.

F. W. MABBOTT,
Clerk of the Executive Council.
