UNDER the powers conferred by the *Health Act 1928* (No. 3697) and all other powers enabling him in that behalf, His Excellency the Lieutenant-Governor of the State of Victoria, with the advice of the Executive Council of the said State, doth hereby amend the Building Regulations 1924 as follows:—

1. These Regulations may be cited as the Amending Building Regulations 1932, and shall come into operation on the first day of July, 1932.

2. Clauses 151, 156, and 157 are hereby repealed, and the following substituted therefor:—

CONSTRUCTION, ETC., OF PROJECTING APPLIANCE.

151. The proprietor of any building shall not permit any picture-projecting appliance to be used, and no person shall use therein any such appliance unless the following conditions are complied with:—

(1) The appliance shall be so constructed and designed as to eliminate as far as possible danger of fire or explosion.

(2) The lantern, the body of which shall be constructed of metal, shall be enclosed in such a manner as to prevent the escape of pieces of incandescent carbon.

(3) (a) Every picture-projecting appliance shall be placed on firm supports of fire-resisting construction, and shall be fitted with an approved device, which shall operate instantly and automatically to protect the film from ignition by heat rays from the illuminant in the event of breakage, or stoppage, or bunching, or looping of the film: Provided that no such device shall be required with respect to any appliance in which the source of illumination is an incandescent electric-light bulb of not more than 1,000 candle power.

(b) The approval of such device may be given, subject to such reasonable conditions as the Commission may impose.

(4) The film gate shall be of substantial fire-resisting construction and provided with ample heat radiation surface, and the passageway for the film shall be sufficiently narrow to prevent flame travelling upwards or downwards from the light opening. The said gate shall be so protected as to prevent as far as possible the heat from the condenser being concentrated upon any other portion of the film than that exposed in the aperture.

(5) Film passing through the projecting appliance shall be wound as fast as it emerges from the projector, leaving only the shortest possible portion of film exposed to the light.

The running of overloaded spools, the running of film on the floor of the cabin, and the showing in public of film having torn sprocket-holes are hereby prohibited.

(6) The frame discs of spools, bobbins, and reels containing film shall be formed of incombustible material, and shall, together with the whole length of film other than the portions necessarily exposed, be entirely enclosed in boxes or cases made of incombustible material without the use of solder, and of substantial construction with an internal diameter not exceeding that necessary

for accommodation of 2,000 lineal feet of film, and fitted with a firetrap or other apparatus which shall effectually prevent ignition of the film contained therein.

- (7) Every such appliance shall be maintained in a safe working condition, and the person using it shall, when requested so to do by the proprietor, furnish him with a written report as to the working condition thereof at the time, which report shall be shown on demand to any officer of the Commission.

PROJECTING APPLIANCE TO BE IN A FIRE-PROOF CABIN.

152. The proprietor shall cause the said appliance when in use to stand in a compartment, cabin, room, booth, or box (hereinafter called a cabin) of fire-resisting construction, and, except where the use of a temporary portable or semi-portable cabin is approved, such cabin shall be of a permanent character and fixed in position.

CONSTRUCTION OF CABIN.

153. The proprietor shall cause every permanent cabin to be of the dimensions, and to be constructed, ventilated, and equipped as follows, viz. —

- (1) Such cabin shall be so located and constructed as to allow the operator at all times safe and convenient means of ingress and egress, and to permit of the safe and expeditious use of the fire-extinguishing apparatus, either from inside or outside the cabin, in case of fire or accident involving risk of fire.
- (2) Such cabin shall have an internal height of not less than 7 ft. 6 in., and a floor space and horizontal sectional area according to the number of picture-projecting appliances accommodated therein, as follows, viz. —

Cabin No.	Number of picture projecting appliances accommodated in the Cabin.	Horizontal internal dimensions of such Cabin.
1	1	6 feet wide x 8 feet deep
2	2	9 feet wide x 8 feet deep
3	2 and 1 stereopticon.	12 feet wide x 8 feet deep

Provided that when any re-winding bench, battery, gramophone, or other appliance is installed or to be installed in a cabin, the size of the cabin shall be increased to the satisfaction of the Commission.

- (3) The walls and ceiling of such cabin shall be constructed of or lined with approved fire-resisting material, and the floor shall be of tongued and grooved boards of jarrah or redgum not less than $\frac{3}{4}$ of an inch thick or of approved hardwood not less than $1\frac{1}{2}$ inch thick, or of concrete, with insulating mats alongside each machine and in front of the switchboard.

If fibro-cement sheets are used for lining the walls of the cabin, they must be fixed on a continuous backing of hardwood boarding at least $\frac{1}{2}$ inch thick up to a height of, at least 5 feet above the floor.

- (4) Every such cabin shall be provided with one or more doorways affording means of exit from the cabin. Each such doorway shall be fitted with a door which shall open outwards and be fire-resisting, self-closing, and smokeproof, and which shall, except during its actual use in entering or leaving the cabin, be kept closed while the building is in public occupation.
