CITY OF OAKLEIGH.

REGULATION No. 8.

A Regulation of the City of Oakleigh made under the provisions of the *Local Government Act 1928* by virtue of a By-law No. 34 of the City of Oakleigh, and numbered 8, relating to the construction of crossings over footways and channels.

IN pursuance of the powers conferred by the *Local Government Act 1928*, the Council of the Mayor, Councillors, and Citizens of the City of Oakleigh orders as follows:—

1. *Definitions.*—Wherever appearing in this Regulation—

“Approved” means approved by the Council’s Engineer.

“Commercial vehicle” means any vehicle (including a motor car) used for the carrying of goods in the course of trade or business.

“Crossings” means a carriageway or drive for providing access with horses or other animals or vehicles from any street or road to any land which fronts to, adjoins, or abuts upon the footway of such street or road.

“Engineer” means the Council’s Engineer.

“Light vehicle” means any vehicle other than a “commercial vehicle,” and includes a motor car of the ordinary passenger or pleasure type.

2. Crossings over footways and channels shall be constructed only in accordance with the details specified hereunder, and shall be completed to the satisfaction of the Engineer.

3. Except as hereinafter provided, all crossings shall be constructed of concrete, and in no case shall be less than 9 feet in width.

4. Concrete to be used in the construction of crossings required for the passage of commercial vehicles, or any other vehicle which, in the opinion of the Engineer, requires a similar type of construction, shall be not less than 6 inches in depth throughout, and, in the construction of crossings required for the passage of other than commercial vehicles, the concrete shall be not less than 4 inches in depth throughout. Concrete shall consist of one part of Portland cement, two parts of approved clean sand, and four parts of approved crushed stone. If required by the Engineer in any particular case, the concrete shall be reinforced with No. 5 gauge mild steel rods spaced 6-in. centres both ways.

5. Between the building line and the invert of the channel, crossings shall be constructed flush with the existing levels of the footway immediately adjoining or as near as practicable thereto, and, from the invert of the channel, continue towards the roadway on an upward gradient for a distance equal to the width of the existing channel and having the same inclination to the invert as the existing channel.

6. In streets or roads in which, at the site of any proposed crossing, there is a kerb along the outer edge of the footway, the crossing, so far as the footway extends, shall have on both sides a kerb not higher in any part than the surface of the footway at that part, and such kerb shall approach to and join the street kerbing in gentle curves outwards.

7. If, in the opinion of the Engineer it is not practicable or desirable that any proposed crossing shall be constructed by grading from the building line to the invert of the channel, an approved reinforced concrete pipe or box culvert may be laid along the channel line, and the crossing constructed by grading from the building line to a level above such pipe or culvert in such a manner as will provide sufficient cover for the passage of vehicles over the same without causing damage thereto. The ends of all pipes or culverts shall be finished in such a manner as will permit of a free inlet to and discharge of channel drainage.

8. Notwithstanding anything hereinbefore contained, crossings for carrying horses or other animals or carriages, carts or other vehicles other than commercial vehicles may be constructed of materials other than concrete provided such materials are similar to those used in the paving of the footway where such footway will immediately adjoin such crossing, and in the opinion of the Engineer such crossing would be capable of carrying the class of traffic herein referred to without being damaged thereby.
