REGULATION No. 6.

Footpath Crossings.

A Regulation of the City of Geelong West, made under the *Local Government Act 1928*, by virtue of a By-law No. 60 of the above-named City, and numbered 6, fixing the width, inclination, and depression of crossings, and materials of which same are to be constructed.

IN pursuance of the powers conferred by the *Local Government Act 1928*, the Mayor, Councillors, and Citizens of the City of Geelong West do hereby order and direct:—

1. That Regulation No. 2 shall be and the same is hereby repealed.

2. That crossing over footways shall be flush with the footway for one-third of the width of the footway, and shall then fall with a gradual inclination to the invert of the channel, and from there continue towards the roadway on an upward gradient for a distance equal to the width of existing channel, and having the same inclination to the invert as the existing channel.

3. Crossings shall be constructed the full width of the gateway, but in no case less than 9 feet wide.

4. All crossings must be constructed of concrete or other approved material, 6 inches deep in the case of crossings to be used by commercial vehicles, and 4 inches deep for other vehicles.

5. Concrete shall consist of one part of Portland cement (93 lb. to be taken as a measure for 1 cubic foot) to two parts by measure of clean sand, and four parts of 1½-inch approved metal, free from dirt or other impurities. Concrete to be laid on 2 inches of sand or ashes.

6. Where required, concrete shall be reinforced with mild steel bars, as approved by the Engineer.

7. Where kerbing has been cut away to permit the construction of a crossing, new return kerbing shall be constructed on each side of the crossing to the same specification as existing kerbing, or to an approved design in concrete. Kerbing shall be returned on a radius of not less than 36 inches, and tapered so that top meets rising gradient of crossing in a manner least likely to cause inconvenience to pedestrians, and to the Engineer's approval.

8. Crossings shall be graded with metal or bituminous metal (according to the construction of the existing road) from the outer edge of concrete to the crown of the road.

9. Notwithstanding anything contained in the preceding clauses, if in the opinion of the Engineer it is impracticable to grade a crossing from the footpath to the invert of the channel, he may require the person applying for permission to construct the crossing to supply him with a plan and specification of a reinforced concrete or pipe culvert, showing clearly the depth of the invert below the footpath at the fence line, below the top of the kerb, and below the crown of the road. Plan shall also show the longitudinal gradients and the proposed waterway. Should the Engineer consider the proposal satisfactory, he may approve of the culvert crossing, with or without alterations to the plans and specifications.

FACTORIES AND SHOPS ACTS.

At the Executive Council Chamber, Melbourne, the first day of April, 1947.

PRESENT:

His Excellency the Governor of Victoria.
Mr. Field | Mr. McKenzie.

REGULATIONS CONCERNING THE PROCESS OF SPRAY PAINTING IN FACTORIES AND PLANT AND LABOUR USED IN OR IN CONNEXION WITH SUCH PROCESS.

WHEREAS the Honorable Percy James Clarey, His Majesty's Minister of Labour for the State of Victoria has, pursuant to section 64 of the *Factories and Shops Act 1928*, certified that the process of spray painting in factories and the plant and labour used in or in connexion with such process are dangerous: Now therefore His Excellency the Governor of the State of Victoria, by and with the advice of the Executive Council thereof, in pursuance of the powers conferred by section 64 of the said Act, doth make the following Regulations concerning such process, plant, and labour, that is to say:—

1. These Regulations may be cited as the "Spray Painting" Regulations and shall come into operation on the first day of May, 1947.

DEFINITIONS.

2. In these Regulations—

"Spray Painting" means the application by spraying to any article of hydrogen peroxide, molten metal, lead paint, oil-base paint, silica paint, lacquer, enamel, varnish, oil-stain, shellac, any liquid containing nitro-cellulose, or mixtures of these materials or any other inflammable or toxic substance.

"Lead Paint" means any paint, paste, spray, stopping, filling, or other material used in painting, which when treated in the manner prescribed in Schedule I. hereto, yields to an aqueous solution of hydrochloric acid, a quantity of soluble lead compound exceeding, when calculated as lead monoxide, five per centum of the dry weight of the portion taken for analysis.

"Silica Paint" means any paint, paste, glaze, spray, or other material which contains free silica to the extent of two per centum of the dry weight of the portion taken for analysis.

PART I.—DUTIES OF OCCUPIERS.

Booths.

3. The occupier of a factory in which spray painting is carried on shall provide a suitable booth, and no spray painting shall be carried on except in such booth, provided that—

- (a) a booth shall not be required when spray painting is carried out in the open air and has a complete surrounding isolation of at least 15 feet;
- (b) boilers and heavy articles usually made in boiler-making and engineering works may be sprayed in the open workroom in which they are assembled during periods when all other work within 40 feet of same is effectively separated therefrom by an incombustible gastight wall;
- (c) minor operations of spotting and touching up of any spray finish or other finish which had been damaged in the course of manufacture or assembly, may be carried out in the open workroom to the extent of not more than ninety minutes in any one day;
- (d) in factories where vehicles or articles are made, assembled, or repaired, such vehicles or articles may be sprayed in the open workroom if such operations do not involve the use of lead paint or silica paint, and if such workroom is ventilated in accordance with the provisions of clause 5 (b), and if such spraying operations do not exceed fifteen minutes in every two hours.

Booths may be of the following types:—

Cabinet Booth.—An enclosure so arranged, constructed, and equipped to confine and control exhaust air motion in a manner to effectively protect the spray operator and all others in the vicinity.

Room Booth.—A building, or portion of a building, used wholly or in part as an enclosure for spray painting operations.

Tunnel Booth.—An arrangement of enclosing walls, floor, and ceiling, with two opposite ends open to permit of continuous movement through the booth of articles being sprayed, designed, and equipped to effectively protect workmen in or near such booths.

Canopy Booth.—An arrangement of walls and ceiling forming a canopy or hood, designed and equipped so that when it is in a position over an article being spray painted the operator and all others in the vicinity will be effectively protected.

CONSTRUCTION OF BOOTHS.

4. (a) (i) The internal walls and ceiling of every booth, other than a room booth, shall be constructed entirely of, or be entirely lined internally with, 20-gauge sheet steel or other material of equivalent strength, and shall be free from any obstruction so as to permit of them being easily and effectively washed down and cleansed when required.
- (ii) Every room booth shall be constructed entirely of, or be entirely lined internally with, incombustible materials.
- (b) All windows in every booth shall be of wired glass in fixed metal sashes.
- (c) The floor to every booth and the floor area to a distance of at least 3 feet beyond the entrance thereto shall be of impervious incombustible material.

EXHAUST VENTILATION.

5. (a) Every booth, other than a room booth, shall be fitted with suction exhaust ventilation capable of producing and maintaining within the breathing zone of the operator a uniform air movement of not less than 100 linear feet per minute. Where a larger air movement is necessary the Chief Inspector may require the occupier to increase such movement.

(b) The air in any room booth or any place exempted by the provisions of clause 3, in which spray painting is being done, shall be changed by mechanical ventilation, exhaust fan, or other means, at least thirty times in each hour.

(c) All fans operated in ducts shall be constructed of such metal or combination of metals as will prevent sparking when the fans are in use.

(d) The method of ventilation used shall be one of the following:—

- (i) Induced or syphon type, i.e., fans and motors entirely outside the booths and ducts.
- (ii) Fans in duct, but motor and bearing outside, and shaft driven. The motor driving the fan shall be of non-sparking induction type, and shielded against vapours and dust.
- (iii) Fans in duct, but motor and bearing outside, and belt-driven; provided that belt and pulley within the duct or booth are thoroughly enclosed and adequately electrically earthed.
- (iv) Any other method approved in writing by the Chief Inspector.

If more than one fan is used the control shall be so inter-connected that one fan cannot be operated without operating all.

- (e) (i) There shall be fitted to every booth one or more metal ventilation ducts having airtight joints and of sufficient capacity through which all spray laden or contaminated air shall be discharged from the booth to the outside atmosphere.

Any other device designed to cleanse contaminated air discharged by exhaust fans may be installed when approved by the Chief Inspector.

- (ii) A separate exhaust system shall be provided for every booth except that one system may be used for a group of booths, the total aggregate volume of which does not exceed 50 cubic feet.

- (iii) The exhaust ducts—

- (a) shall extend to a height exceeding the of the factory and when required by the Chief Inspector of any adjacent building.

The termination of every exhaust duct shall have affixed thereto a cowl or other similar device for the purpose of protecting the exhaust system from the detrimental effects of weather and fire hazards from any source, and shall be arranged so as not to constitute a nuisance or fire hazard;

- (b) shall not be erected within 9 inches of any woodwork or other combustible material unless effectively insulated therefrom;
- (c) shall be fitted with inspection openings and clean out holes at upturned elbows and other places where accumulation may reasonably be expected.
- (f) The ventilation plant of every booth shall be kept running for at least five minutes after any spraying operations have ceased.
- (g) The ventilation of the workroom in which any booth is erected shall allow of free entrance of the outer air to further ensure that the spraying will be done between the source of entrance air and the exhaust fan.

SPRAYING IN CONFINED SPACES.

6. Where, in order to carry on spraying operations, an employee must temporarily work in any boiler, tank, or other article or in a space which is confined, without the air changes as required by clause 5 (b), the occupier shall provide a positive pressure helmet or distant breathing mask for use by each person employed in such confined space.

ELECTRICAL EQUIPMENT.

7. All electrical wiring, appliances, and fittings shall be installed in accordance with the Regulations of the State Electricity Commission of Victoria.

USE OF CERTAIN SUBSTANCES PROHIBITED.

8. The following substances shall not be used in spray painting:—

Carbon bisulphide, carbon tetrachloride, tetrachlorethane, arsenic or its compounds, and no material used in spray painting shall contain more than one per centum of benzol or methyl alcohol.

STORAGE OR SPRAYING MATERIALS.

9. (a) No oil-base paint, nitro cellulose, lacquer, enamel, varnish, oil stain, shellac, or mixtures of these materials or other inflammable substances or mixtures in excess of one day's requirements shall be brought into or allowed to remain in any factory unless kept in a fireproof cabinet or room conforming with the following details:—

- (i) Fireproof cabinets for the storage of not more than 50 gallons in all of the spraying materials referred to aforesaid.

The sides, top, bottom, and tight-fitting door of every such cabinet shall be double-walled with at least a 1½-in. air space between and constructed entirely of substantial incombustible material, the bottom of which must form a liquid-tight sump of a capacity at least equal to 25 per centum of the total storage capacity of the cabinet, but not less than that of the largest container therein. Vents of suitable size and made of incombustible material properly insulated shall be provided for each cabinet as follows:—

From the top of the cabinet to the outside atmosphere.

From the outside atmosphere to the lower portion of the cabinet entering the cabinet at a point not more than 1 inch above the top level of the sump of such cabinet.

- (ii) Fireproof rooms.—The walls, roof, and floor of every fireproof room shall be constructed of brick or reinforced concrete, with every opening communicating with the building protected by a fire door constructed and installed in accordance with the Specifications for Fire Doors of the Fire and Accident Underwriters' Association of Victoria. In order to prevent outflow the lower portions of all walls shall be without break or opening so as to form at the base of such room a liquid tight enclosed space, the capacity of such enclosed space to be at least 25 per cent. of the total volume of such inflammable substances or mixtures stored or retained in any such room and not less than the total capacity of the largest container therein. The room shall be adequately vented to the outside atmosphere near floor and ceiling and every vent shall be covered with wire gauze of not less than 28 meshes per lineal inch securely attached.

(b) All spraying materials referred to in clause 9 (a) shall be kept when not actually in use in closed airtight metal containers.

(c) Gravity feed containers used in the spray application of the materials referred to in clause 9 (a) shall not exceed 10 gallons in capacity and shall be suspended by incombustible material.

(d) Lead or silica paint shall not be stored or kept otherwise than in receptacles legibly marked "Lead Paint" and "Silica Paint" respectively.

Provided that this requirement shall not apply to receptacles—

- (i) containing lead paint or silica paint in actual use in spray painting;
- (ii) for mixing lead paint or silica paint for immediate use.

FIRE EXTINGUISHERS.

10. One or more 2-gallon fire extinguishers of the foam or other suitable type shall be maintained in a position as close as practicable to every booth in which any material referred to in clause 9 (a) is sprayed and to every fireproof room used for the storage of such materials.

Arrangements satisfactory to the Chief Inspector shall be made for such extinguishers to be maintained in an effective condition.

WASTE MATERIALS.

11. Metal containers with close-fitting lids shall be provided for the deposit of cotton waste, cleaning rags, or similar materials which have been in use. Such containers shall at the close of each day's work be removed from the building in which the spray painting operations are carried out.

POSITION OF ARTICLE TO BE SPRAYED.

13. The article to be sprayed shall be placed in such position within the booth that the workman using the spray gun will always have the gun between himself and the exhausting fan or appliance.

Turn-tables or other mechanical appliances of impervious incombustible material shall be provided, when necessary, by the occupier, to ensure this effect.

CLEANING OF BOOTHS.

14. All spray booths and floor areas surrounding booths, fans, exhaust ducts, trunks, and casings shall be thoroughly cleansed at least twice a week or more often if considered necessary by an Inspector, and the implements used in such cleansing shall be composed of fibre, wood, or non-ferrous metals.

DOORS.

15. Where doors are fitted to any booth or work-place in which spraying is carried on they shall be made to open outwards.

RESPIRATORS.

16. The occupier shall provide suitable respirators approved by the Chief Inspector, and shall maintain same in an efficient condition for all persons engaged in—

17. When requested by an Inspector a sample of any material in use or mixed for use in spray painting shall be provided by the occupier, and this shall be taken in the presence of such Inspector, who shall forthwith seal such sample and deliver same to the Government analyst. Should the occupier so desire a second sample shall at the same time be sealed by the Inspector and handed to the occupier.
