NOTICE TO MARINERS.

[No. 7 of 1947.]

AUSTRALIA.—VICTORIA.

PORT PHILLIP.—WEST AND COLES CHANNELS.

Leading Lights to be Established.

(1) West Channel.—Northern approach.

Date.—About November, 1947.

Position.—(a) Rear light—High light, Queenscliff; lat. 38 deg. 16 min. 25 sec. S.; long. 144 deg. 39 min. 44 sec. E. (approx.).

Details.—

Character.—Occulting white every fifteen seconds, eclipse 2.5 seconds.

Elevation.—130 feet (39m6).

Visibility.—17 miles, intensified from 224 deg. to 228 deg. Should the electric current temporarily fail, the light will show occulting every 5.5 sec., eclipse 2.5 sec.

Structure.—Blue stone tower, 81 ft. (24m7) in height.

Position.—(b) Front light—standing in a depth of 11 ft. 045 deg. 53 min. distant 2.84 miles from (a) above.

Name.—Coles Channel light.

Details.—

Character.—Flashing white every 4 sec.

Elevation.—20 ft. (6m1).

Visibility.—10 miles.

Structure.—White hut or six-pile wooden structure, black, 18 ft. (5m5) in height. The leading line is to be shown in pecked line from (a) above in an 045 deg. 53 min. direction for 5.0 miles, thence in a firm line for 2.0 miles. The note "Lts. in line 225 deg. 53 min." is to be shown along the northern end of the firm line.

Aspect: Day marks.—Two white triangular slatted beacons, a grey building, and a pine tree, all in transit with the High light, bearing 225 deg. 53 min., stand at 2.63, 3.19, 3.29, and at about 10 cables respectively from the Front light (b) above.

Directions.—As this line defines the axis of the passage between West and William sands at the northern end of the channel, where it is intended for use between No. 10 and the West Channel pile lights, there is ample room for passing vessels to keep to their respective starboard sides therefrom.

(2) Coles Channel.—Leading lights.

Date.—About November, 1947.

Position.—(a) Rear light—Monash; lat. 38 deg. 19 min. 06 sec. S.; long. 144 deg. 40 min. 44 sec. E.

Details.—Unaltered.

Position.—(b) Front light unaltered (1b) above.

Details.—(1b) above. The leading line is to be shown in pecked line from (2a) above in an 015 deg. direction for 4.83 miles, thence in firm line for 4.05 miles, thence in broken line for about 2.5 miles. The note "Lts. in line 195 degrees" is to be shown along the northern end of the broken line.

Directions.—Vessels of draught not exceeding 8 feet may use the lead throughout its length and pass well clear to the eastward of Governor Reef buoy. Vessels of draught from 8 to 10 feet should use the lead from abreast and southward of the flashing green light at the south head of St. Leonards' breakwater.

Aspect: Day marks.—The coning tower of the submarine, ashore at Swan Point, bearing 195 deg. distant 3.35 cables from the Front light (1b) above, and the Monash light, are all in transit.

CAUTION.—Vessels using the anchorage must not, at any time, occult the leading lines, and in manoeuvring to anchor shall, during the period of construction, give the Front light a berth of at least 1 cable to avoid the fouling of anchors and breast lines therefrom.

Charts Affected.—Departmental—Entrance to Port Phillip—West Channel, Port Phillip; Admiralty Nos. 2747-309—1171.

Publications.—General Notice to Mariners, Respecting Navigation in Victorian Waters 1942, pages 297, Light No. 19, 111, 112 (2), and 121 (1). Australian Pilot, Vol. II., 1944, pages 69, 75, and 80. Admiralty List of Lights, Part X., 1945, No. 2200.

DEPARTMENT OF PUBLIC WORKS.

At the Executive Council Chamber, Melbourne, the twenty-third day of September, 1947.

PRESENT:

His Excellency the Governor of Victoria.

Mr. Cain

Mr. McKenzie.

IN pursuance of the provisions of the *Local Government (Private Street Construction) Act 1947*, His Excellency the Governor of the State of Victoria, being satisfied that owing to shortages in supplies of cement or other required materials the works provided for in schemes adopted by the Council of the City of Sandringham for the construction of Bateman-street, Ivy-street, and Barnett-street, Hampton, being private streets within the municipal district of the said City, which works were commenced prior to the commencement of the said Act, cannot be satisfactorily executed in accordance with the specifications, maps, plans, sections, and elevations in the scheme pursuant to which the works were commenced, doth by this Order, by and with the advice of the Executive Council of the said State, authorize the Council of the City of Sandringham to execute the works with the following variations of the said specifications:—

In lieu of clauses contained in the respective specifications commencing with that headed "Cement Penetration Roadway" and ending with that headed "Pitchers," there shall be substituted:—

Bitumen Penetration Roadway.

Over the areas shown on plans, a bitumen penetration pavement of six (6) inches finished thickness shall be laid on a prepared sub-base of ashes, two (2) inches in consolidated thickness.

Ashes.

Ashes shall be approved well-burnt ashes, free from unburnt rubbish; extremely coarse or extremely fine ashes will not be permitted. Ashes shall be lightly watered and then rolled with a roller weighing not less than 6 tons.

Rolling shall continue to the satisfaction of the City Engineer, who may order such wetting and rolling as he thinks fit.

Metalling.

The metal shall be basalt or other approved metal, properly screened free from chips, under or over gauge stone and dirt, and is to comply with the following grading tested with laboratory screens having circular openings:—

Bottom Course.		Top Course.	
Passing 2½ in.	100 per cent.	..	100 per cent.
Passing 2 in.	50-80 per cent.	..	100 per cent.
Passing 1½ in.	0-15 per cent.	..	50-70 per cent.
Passing 1 in.	0-10 per cent.

The metal is to be spread in two layers to give 3 inches consolidated thickness in each layer. Construction of each layer is to be by the following method, and carried out in the order as set out hereunder:—

- (1) A bottom course of 2-in. metal spread to a depth of 4 inches loose measurement shall be laid on the prepared sub-base, and rolled with an approved roller until thoroughly consolidated.
- (2) When thoroughly consolidated, the bottom course is to be blinded with fine crushed rock sufficient to fill all voids, watered and rolled until the whole is thoroughly compacted and bonded. Blinding is to be applied in successive applications, and broomed where necessary to prevent any caking of blinding on the surface of the metal. (The quantity of fine crushed rock for this operation is estimated at 1 cubic yard to 4 cubic yards of metal.) The Engineer may order such blinding and watering when rolling is in progress as he thinks fit; all subsidences are to be made good while rolling is in progress.
- (3) After the bottom course of metal has been thoroughly bonded and consolidated, a second course of 1½-in. metal spread to a depth of 4-in. loose measurement shall be laid. All metal for this course shall be tipped from the trucks on to suitable flat sheets or dumping boards, which shall be large enough to hold at least 1 cubic yard, and the metal shall be spread therefrom. The workmen engaged in spreading must be approved by the City Engineer, and any inefficient spreader must be replaced by a suitable man. Should the Engineer consider it necessary, metal trucks shall not traverse any metal that has already been spread. Care must be taken to prevent any dirt or other foreign substance being carried on to the metal before penetration. Rolling is to begin at the sides working towards the centre, and shall be carried out until the metal is thoroughly consolidated.

- (4) When second course of metal has been consolidated, the whole surface of the metal is to be closed by the application of ½-in. screenings. (It is estimated that the quantity of screenings required for this operation will be 1 cubic yard to 80 square yards of metal surface.) Sufficient rolling to force all screenings into the voids shall be carried out.

Bitumen Penetration.

After top course metal has been consolidated and closed to the satisfaction of the City Engineer or his representative, and while metal is thoroughly clean and dry, the whole surface shall be penetrated with an application of bitumen of 80/100 penetration uniformly applied at a temperature of from 300 to 350 degrees with an approved mechanical sprayer at the rate of two-thirds of a gallon per square yard of metal surface. Bitumen shall be of approved brand, and the contractor shall give notice of brand and supplier before work is commenced.

Immediately after penetration, the surface treated must be covered with clean ½-in. screenings, and the whole road rolled to a compact regular and smooth surface, with an approved roller. Application of screenings is to be by means of mechanical spreader, first application is to be of such quantity as will barely cover the bitumen, additional screenings shall be applied and broomed into the voids, whilst rolling is in progress. Care must be taken not to apply screenings in a thick layer. Rolling and brooming shall be continued until the whole surface is thoroughly compact, and no movement or rutting occurs. (The quantity of screenings required for this operation is estimated at 1 cubic yard to 60 square yards of road surface.) The road may then be opened to traffic providing that permission is given by the City Engineer or his representative.

Seal Coating.

Within 24 hours of the completion of the penetration, or at such interval as may be directed, the contractor shall arrange to apply a bituminous seal coat. Construction of the seal coat is to be by the following method, each operation being carried out in the order as set out hereunder:—

- (1) After the road surface has been thoroughly cleaned and any irregularities caused by traffic have been made good, the whole of the surface shall be sprayed with 80/100 penetration bitumen applied at 350 deg. with a mechanical sprayer at the rate of 0.25 of a gallon per square yard of road surface.
- (2) Immediately after spraying, the surface treated shall be covered with clean ½-in. screenings, applied with a mechanical spreader at the rate of 1 cubic yard to 70 square yards of surface. The quantity of screening as set out will be spread in successive applications, the first application being sufficient only to take up excessive bitumen. The whole shall then be rolled with an approved roller, drag broomed, and rolled again, the balance of the screenings being applied as rolling and brooming progress. The last operation by the roller will be to iron out all wheel marks from the road's surface.
- (3) When the first seal coat has been broomed and rolled to a smooth compact surface, a second application of 80/100 penetration bitumen applied at 350 degrees shall be sprayed at the rate of 0.25 of a gallon per square yard of road surface.
- (4) Immediately after spraying, the surface treated shall be covered with clean ½-in. toppings applied with a mechanical spreader at the rate of 1 cubic yard to 100 square yards of road surface. The whole shall then be rolled, broomed, and rolled again, this operation continuing until the surface is smooth and well compacted.
- (5) After the second seal coat has been completed, a final seal of bituminous emulsion will be applied with a mechanical sprayer at the rate of 0.20 of a gallon per square yard of surface.
- (6) The application of bituminous emulsion will be covered with Koo-wee-rup sand at the rate of 1 cubic yard to 200 square yards of surface. The whole of the road will then be rolled and drag broomed as necessary.
- (7) Any sand that is thrown off the roadway by the traffic during the maintenance period of the contract will be swept back and evenly distributed over the road's surface, and rolled if so ordered. At the end of the maintenance period all surplus sand will be swept up and carted away by the contractor.

(8) Fluxing of any of the several applications of bitumen will not be carried out unless ordered in writing by the City Engineer.

NOTE.—Measurement for bitument penetration roadway as set out in this specification will be by the square yard.

Quantities.

Estimates of covering capacity of aggregates are approximate only, and are inserted for the guidance of the contractor. They form no part of the specification, and the contractors must form their own estimates of aggregate required for each operation as described in the specification.

Protection of Work.

The contractor shall provide and keep on the job sufficient and suitable barricades for the protection of the work and the safety of the general public. The contractor shall employ a watchman to do this work at night and at week-ends and holidays, and shall allow for same in his schedule price. All the necessary materials for the protection of the work shall be on the site of the works before commencing.

Pitchers.

At the edges of the bitumen road, if and where shown on plan, shall be laid a row of 6-in. bluestone pitchers set on 3-in. thickness of concrete 1:2:4 mix. All pitchers shall be grouted with 1:2:4 concrete.

And the Honorable Thomas Hayes, for and on behalf of His Majesty's Commissioner of Public Works for the State of Victoria, shall give the necessary directions herein accordingly.

Clerk of the Executive Council.
