VARIATION OF SPECIFICATION FOR SCHEME OF
PRIVATE STREET CONSTRUCTION, CITY OF
FOOTSCRAY.

IN pursuance of the provisions of the *Local Government (Private Street Construction) Act 1947*, the Honorable Sir Charles John Lowe, as Deputy for His Excellency the Governor of the State of Victoria, being satisfied that the works provided for in the scheme adopted by the Council of the City of Footscray for the construction of New, Saltley, Truman, Aloha, Brunel, and Moresby streets, and parts of Paxton, Greene, Vernon, Kernot, Watt, and Stephenson streets, being private streets within the municipal district of the said city, cannot be satisfactorily executed in accordance with the specifications, maps, plans, sections, and elevation in the scheme, doth by this Order, by and with the advice of the Executive Council of the said State, authorize the Council of the City of Footscray to execute the works with the following variations of the said specifications, viz.:—

(1) At the end of clause 19, there shall be inserted the following:—

Second-hand Pitchers.—All second-hand pitchers shall be of the best bluestone, free from honeycomb surface and all other defects, 9 in. wide on top, not less than 8 in. or over 9 in. on bottom, not less than 6 in. deep, and between 10 in. and 14 in. long.

All pitchers shall be dressed smooth on the top face and have square angles. Any pitcher with bumps and knobs on top surface will be condemned.

Continuity of Channel Construction.—Three types of street channel are specified herein. Before any section of channel is constructed, the contractor must obtain from the City Engineer, or his representative, approval of the type of material it is proposed to use in such section of channel.

Each type shall be paid for on the actual length constructed and to the appropriate contract rate or subsequent rate approved by the council.

(2) At the end of clause 22, there shall be inserted the following:—

CONCRETE CHANNEL AND KERB.

Formation.—After the foundation has been properly formed to the correct shape as shown on the drawings, it is to be covered with a layer of approved fine engine ashes and tamped smooth to a depth of three (3) inches. Immediately before concrete is poured, the ash bed shall be thoroughly wetted.

Formwork.—Forming and timbering shall be securely fixed in position, and no concrete shall be poured until the formwork has been approved by the Clerk of Works. Forms shall conform to the shape, lines, and dimensions required in the finished concrete. The material to be used for exposed surfaces shall be softwood, free from loose knots or other defects, and shall be uniform in thickness. Forms shall be thoroughly cleaned before being used and, if necessary to close cracks due to shrinkage, shall be thoroughly soaked with water. They must be substantial and rigid, and shall be so constructed and fixed in position that they may be removed without causing damage to the concrete.

Aggregates and Proportioning.—The aggregate used in the concrete for channels and the proportioning and mixing of the aggregates shall comply with the requirements specified in the clause headed "Concrete for Cast-in-place Pipes, Pits, Crossings, and Grout-for-Channels" in these specifications. The grading of the coarse aggregate shall comply with that required for pits.

Placing and Finishing Concrete.—During and immediately after placing, concrete shall be thoroughly compacted by means of continuous ramming, spading, and slicing. An approved iron or steel rammer shall be continuously used while the concrete is being placed. The kerb shall be formed at the same time as the channel.

Care must be taken to fill every part of a form without displacing it and to remove all air bubbles and voids. It shall then be screeded to correct shape and under no circumstances shall placed concrete be shaken, displaced, or disturbed after initial set has taken place. As soon as possible after the concrete has been placed and compacted, it shall be finished by steel trowelling to a smooth surface with a 3-in. rendering coat of screened sand, stone dust, and cement, in the proportions of two parts of stone dust, one part of sand, and one part of cement, or, alternatively, the concrete shall be tamped solidly to the correct and full thickness and finished off by steel trowelling with a dry mix of three parts of stone dust and one part of cement.

Joints.—Channels shall be laid in lengths of 10 feet. At each joint, templates of stout cardboard cut to the dimensions of the kerb and channel shall be placed on each side of the steel template of the same shape, and must be left in the joint when the steel template is removed. Joints must be set accurately at right angles to the centre line of the channel and must be finished cleanly with an approved jointing tool.

Curing.—Concrete shall be protected from premature drying for at least seven days after being placed, and all surfaces shall be kept wetted during that period and all exposed surfaces shaded from the sun by bags. New surfaces shall be effectively protected from rain until hard set has occurred. All the necessary covering materials for the protection and curing of the concrete shall be on the site of the works before any mixing is commenced.

Damaged Concrete.—Any concrete paving or channeling damaged by rain or other cause, must be completely replaced by the contractor at his own expense. The re-surfacing of damaged concrete will not be permitted.

4-in. Agricultural Pipes.—The contractor shall supply and lay a line of 4-in. agricultural drain pipes underneath and to the same gradient as the channel. The top of the pipes shall just clear the underneath of the water service conduits, and the trench shall be filled with ashes. The pipes are to be connected to drains as instructed. For the purpose of tendering, the contractor shall include the cost of the agricultural pipes and the price for the concrete channels and buffer pitchers.

Crossings and Outlets.—Provision for private crossings shall be made in front of all existing double gates by omitting the concrete kerb for a length which is 10 ft. greater than the gate opening. Crossings and outlets for house drainage shall be similarly provided, where land is vacant, at the lower side of each block, unless otherwise instructed by the engineer. The width of openings for crossings in front of vacant lots shall be 19 ft. 4-in. house drain outlets in kerb are to be moulded on wood blocks, turned as shown on plan to provide 2-in. recesses at back of kerb to take the 4-in. fibro-cement pipe house drains. The bottom of the 4-in. opening shall be flush with the sole of the channel.

And the Honorable George Colin Moss, for and on behalf of His Majesty's Commissioner of Public Works for the State of Victoria, shall give the necessary directions herein accordingly.

18. (a) The school fees of apprentices and probationers for attendance at the prescribed classes for instruction shall be paid by such apprentices or probationers, but on the receipt by the employer of a report from the Commission that any such apprentice or probationer has secured during the period covered by the report a record of not less than 80 per cent. of the possible attendances at the prescribed day and evening classes respectively, the employer shall refund to the apprentice or probationer the school fees paid by him for such period of instruction.
