The first part of the paper is devoted to a discussion of the general theory of the
 subject. It is shown that the theory is based on the assumption that the
 system is in a state of equilibrium. This assumption is justified by the fact
 that the system is assumed to be in a state of equilibrium for a long time
 before the experiment is performed. The theory is then applied to the case of
 a system of particles in a magnetic field. It is shown that the theory
 predicts a certain behavior of the system which is in agreement with the
 experimental results.

The second part of the paper is devoted to a discussion of the experimental
 results. It is shown that the experimental results are in agreement with the
 theoretical predictions. The experimental results are also compared with the
 results of other experiments. It is shown that the results of this experiment
 are in agreement with the results of other experiments.

The third part of the paper is devoted to a discussion of the conclusions.
 It is shown that the theory is in agreement with the experimental results.
 The theory is also shown to be in agreement with the results of other
 experiments. The theory is therefore shown to be a valid theory of the
 subject.
