(4) Flexible hoses used in connexion with the pumping of liquids derived from petroleum, coal and/or shale to or from a vessel shall be tested under working conditions at intervals of not more than six months to at least 25 per cent. in excess of the actual maximum working pressure under which it is operated. The results of such test shall be recorded in a register to be kept by the owner and such record shall be made available for examination by the Commissioners as required. A report on tests of hoses used by the owner shall be provided to the Commissioners in January and July of each year. Such flexible hoses shall be properly and adequately supported to prevent chafing and kinking during pumping operations.

(5) Pipe lines used in connexion with the pumping, to or from a vessel, of liquids derived from petroleum, coal and/or shale having a flash point of over 150 deg. F. and unrefined crude petroleum, shall be provided with drip trays or drums under the seaward end of the pipe line of a type approved by the Commissioners.

(6) Pipe lines and fittings shall be inspected each time before use in loading or discharge and tested to a pressure 25 per cent. in excess of normal operating pressure at three-monthly intervals.

(7) Electrical equipment on oil wharves or located within 50 feet of shore terminal valves in pipe lines shall comply with the appropriate section of the Wiring Rules of the Standards Association of Australia and the requirements of the proper local electrical authority, and shall be inspected at intervals of not more than six months to ensure their continued compliance with such rules or requirements.

(8) Pipe lines for transmission of inflammable liquid with a flash point less than 150 deg. F. shall be tested at intervals of not more than twelve months to ensure that they are suitably bonded and earthed as required by the Commissioners.

(9) At the commencement of pumping of inflammable liquids having a flash point less than 150 deg. F., and after each change of grade of liquid at which water clearance is employed, the velocity in the pipe lines shall be restricted to a maximum of 3 feet per second for a period of 30 minutes, or sufficient time to clear the pipe line twice, whichever is the longer.

This slow pumping rate shall also be observed when filling empty tanks until the fill pipe is covered. When pipe lines vary in bore, the limiting rate shall be applied to that part having the smallest bore.

(10) During pumping operations, pipe lines shall be regularly patrolled throughout their full length so that any leakage may be detected.

(11) During the whole period of pumping operations, the terminal valves on wharf or jetty, and the delivery or control valve on the vessel, shall be closely watched by competent persons who shall close the valves in the event of any untoward occurrence.

(12) Pipe lines, valves, hoses and other appliances used for transferring inflammable liquids with a flash point less than 150 deg. F. shall be maintained free from leakage and gas-tight, and unless otherwise authorized by the Commissioners on the completion of loading or unloading, shall be thoroughly freed of inflammable liquid and the hoses disconnected from the shore pipe lines. Pipe lines, valves, hoses and other appliances used for transferring oil with flash point not less than 150 deg. F., shall be kept in good condition and free from leakage and all due precautions shall be taken to prevent any oil escaping into the waters of the Port.

(13) Necessary precautions shall be taken to ensure that boats, barges or other small craft shall not moor under or remain near the wharf where pumping operations are being carried out.

(14) No naked light, matches or other source of ignition shall be brought within a distance of 50 feet of shore terminal valves when pumping operations are being carried out. Any torch used shall be of flameproof construction and any artificial light used shall also be of flameproof construction unless mounted at least 25 feet above the level of the wharf, when it shall be of a type approved by the Commissioners.

(15) A reliable watchman or watchmen shall be stationed in the vicinity of the vessel during pumping operations and such watchmen shall be persons approved by the Commissioners and in such number as they may require.

(16) A responsible representative of the Master of the vessel and a representative of the installation to which or from which the inflammable liquid is being transmitted by pipe lines, shall be on duty at all times at the point of discharge from or intake of the vessel during preparation for and pumping operations.

(17) The Master of the vessel (or his responsible representative) and the owner of the installation to or from which pumping operations will be made shall ensure in his respective sphere that sufficient fire-fighting equipment as approved by the Commissioners is available for immediate use should such be required.

(18) Any untoward occurrence shall be reported immediately to the Harbor Master or his representative.

(19) The approval of the Harbor Master shall be obtained on each occasion in respect of each particular vessel before pumping operations commence and any additional conditions stipulated by him shall be observed.

(20) Operations shall be discontinued should the Harbor Master consider such course necessary in the interests of safety.

(21) When pumping operations cease temporarily, valves on the vessel and on the shore pipe line shall be closed.

(22) On completion of pumping operations, pipe lines outside storage installations and used for the transmission of inflammable liquids with a flash point less than 150 deg. F., shall be thoroughly cleared of the inflammable liquid by flushing with water and shall be kept full of water.

(23) Except with the approval of the Commissioners, on completion of pumping operations pipe lines shall be cleared of oil with flash point of not less than 150 deg. F. from the point of loading or discharge to the non-return valve at the shore end of the wharf.

(24) Subject to the written approval of the Harbor Master, liquids derived from petroleum, coal and/or shale may be pumped to or from a vessel after sunset, provided that the following conditions and such other conditions as may be stipulated by the Commissioners are complied with:—

(a) Pipe lines, hoses, valves and other appliances shall be coupled up and pumping commenced at least one hour before sunset, and such pipe lines and hoses shall not be uncoupled or otherwise interfered with except in daylight, unless with special permission of the Harbor Master and in the presence of himself or his representative.

(b) Adequate lighting of an approved type shall be provided to the satisfaction of the Commissioners.

(25) Arrangements shall be made by the Master of the vessel to ensure that there shall be sufficient staff of officers and men available at all times to ensure the efficient carrying on of the work, or to remove the vessel if so required."
