Soil Conservation and Land Utilization Act 1958

UPPER KIEWA WATER SUPPLY CATCHMENT

Proclaimed 24 February 1965, *Victoria Government Gazette* No. 14

Notice of Determination of Land Use in Part of Upper Kiewa Water Supply Catchment, Plan No. S-1321

In pursuance of the provisions of section 23, subsection (1) of the *Soil Conservation and Land Utilization Act 1958*, the Soil Conservation Authority, after consultation with the Land Conservation Council, has determined the land use for all that land in the Parishes of Carruno and Darbalang within the boundary of the Land Conservation Council East Kiewa U2 area, being part of the Upper Kiewa Water Supply Catchment, delineated and marked on Plan No. S-1321 (Figure 1), the original of which is lodged at the Head Office of the Soil Conservation Authority. All land within this area shall be used in accordance with the particular category of land use to which the area has been assigned.

The provisions of individual land use categories are set out below and should be read in conjunction with the Determination Plan.

Category Number	Land Use	Provisions of Category
1	Land to be used for the protection of streams, water courses, reservoirs, domestic water supply. Land affected is: (a) Within Staff Camp catchment upstream of the U2 area boundary, as delineated in LCC Plan No. F19A; (b) Slopes generally exceeding 25°, as shown on Plan No. S-1321; (c) Within 20 metres of any permanent or ephemeral stream as shown on Plan No. S-1321; (d) Snow gum communities, as delineated on Plan No. S-1321.	Disturbance of soils and vegetation for stream crossings or any other purpose may be carried out only at locations and in a manner approved by the Soil Conservation Authority. Trees which, during the course of forest operations on adjoining Category 2B land, are inadvertently felled, wholly or partly, into any 20 m protection buffer may only be removed by winching from outside the buffer.
2 2A	Land within Slippy Rock and Springs Creek experimental catchments to be used primarily for water catchment protection, parts of which may also be suitable for forest operations and low intensity recreation.	Forest operations must be in accordance with land use conditions made or approved by the Soil Conservation Authority after consultation with the State Electricity Commission and Forests Commission Victoria. Earthworks for any other purpose may be carried out only after consultation with the Soil Conservation Authority and agreement has been reached on specific management requirements.
2B	Land to be used primarily for water catchment protection, parts of which may also be suitable for forestry operations and low intensity recreation.	Forest operations must be in accordance with land use conditions made or approved by the Soil Conservation Authority after consultation with the State Electricity Commission Victoria and the Forests Commission Victoria, following evaluation and interpretation of the results of experimental catchment logging trials in the East Kiewa Catchment. Earthworks may be carried out only after consultation with the Soil Conservation Authority and agreement has been reached on specific management requirements.

Other Provisions:

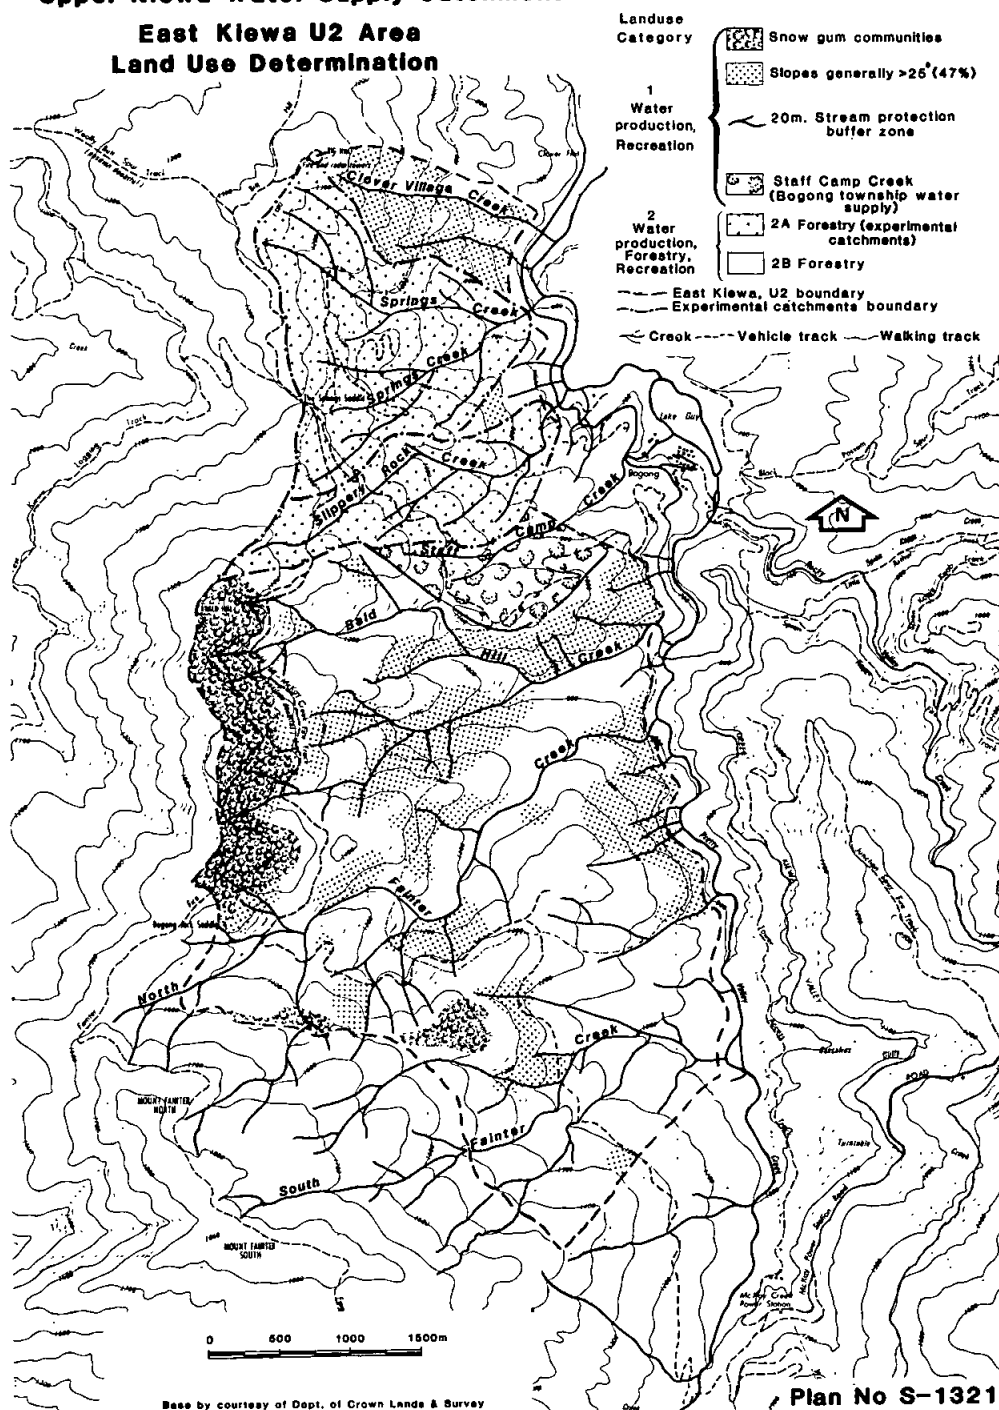

While the categories listed above state the forms of land use which may be permitted with least hazard to the water supply, the Soil Conservation Authority may designate specific requirements or impose conditions under section 23(4)(a) of the *Soil Conservation and Land Utilization Act 1958*, on land determined as being suitable for forestry, recreation or any other land use. Fainter Fire Track may be used as a stock route at times specified by the Soil Conservation Authority.

Interpretation of Land Use Determination Plan:

In interpreting the Land Use Determination Plan (Plan No. S-1321), consideration must be given to the limitations of map scale. Detailed field inspection will normally be required to determine the exact location of stream protection buffers and the location, extent and uniformity of land generally exceeding 25° slope.

Definitions:

Ephemeral stream – drainage line or watercourse carrying surface water during snowmelt, or for short duration following rainfall events of 2mm per hour or greater intensity.
