The Schedule
Part 1—Specified Vehicles

“gross vehicle mass” means the maximum laden mass of the vehicle as specified by its manufacturer;

“overhang line”, in respect of a vehicle, means a line through the rear axle or axle group located as follows:

(a) for a single axle:

the centre line of the axle;

(b) for a tandem axle group:

—where both rear axles are fitted with an equal number of tyres, a line midway between and parallel to the centre lines of those axles;

—where one rear axle is fitted with more tyres than the other axle a line parallel to the centre lines of those axles and located one-third of the total distance between the two axles and nearer to the axle with the most tyres;

a line midway between and parallel to the outside axles of the axle group;

“prime mover” means a motor vehicle that is constructed, designed or adapted for connecting to a semi-trailer;

“rear overhang”, means the distance between the rearmost point of the vehicle (including any load) and the overhang line of that vehicle;

“semi-trailer” means a vehicle without its own motive power which is capable of being drawn by a prime mover in such a way that it is attached to and pivoted on the prime mover by imposition on it on or in front of the rear axle of the prime mover so that the semi-trailer is free to turn relative to the prime mover when the prime mover is rounding a curve and so that part of the mass of the semi-trailer and any load carried on it is borne by the prime mover;

“trailer” means a vehicle without its own motive power which is capable of being drawn by a motor vehicle.
