## PATENT FOR "AN INVENTION CALLED SACCHARATE OF QUICKSILVER."

**THIS** is to notify that Frederick Poeppel, C.E. and architect, and Théodor Migeod, doctor of medicine, both of Ballarat, did, on the sixteenth day of July 1870, deposit at the office of the Chief Secretary, in Melbourne, a specification or instrument in writing, under their hands and seals, particularly describing and ascertaining the nature of the said invention, and in what manner the same is to be performed; and that by reason of such deposit the said invention is protected and secured to them exclusively for the term of six calendar months thence next ensuing: And I do further notify that the said Frederick Poeppel and Théodor Migeod have given notice, in writing, at my chambers, of their intention to proceed with their application for letters patent for the said invention, and that I have appointed Monday the fifteenth day of August next, at Eleven o'clock in the forenoon, at my chambers, to hear and consider the said application and all objections thereto; and I do hereby require all persons having an interest in opposing the grant of such letters patent to leave, on or before the eleventh day of August, at my chambers in Melbourne, particulars in writing of their objections to the said application, otherwise they will be precluded from urging the same.

Given under my hand this eighteenth day of July A.D. 1870.

# PATENT FOR "IMPROVEMENTS IN MOWING AND REAPING MACHINES OR GRASS-HARVESTERS."

THIS is to notify to all whom it may concern that Joseph Nicholson, of Melbourne, agricultural implement maker, assignee of letters patent granted to Robert Bodington, has applied to me for leave to enter a disclaimer and memorandum of alteration of the said invention, the particulars whereof are stated below: I do therefore appoint Monday the fifteenth day of August next, at Eleven o'clock in the forenoon, to hear and consider the said application and all objections to the same; and I do hereby require all persons having an interest in opposing the said application to leave, on or before the eleventh day of August, at my chambers in Melbourne, particulars in writing of their objections to the same, otherwise they will be precluded from urging such objections.

Given under my hand this eighteenth day of July A.D. 1870.

ARCHD. MICHIE,  
Attorney-General.

The following is the disclaimer and memorandum of alteration which I desire to make in the specification of the above invention, viz.:—The specification of this invention entered in the "Register of Patents," (including drawings, and "description of drawings" forming part thereof) refers mainly to mechanical contrivances which I do not desire to claim, whilst one of the material parts is insufficiently referred to and illustrated. I desire therefore to disclaim everything referred to in such specification except those parts claimed in this "disclaimer and memorandum of alteration."

This invention then I desire to restrict to the peculiar construction of two mechanical contrivances, namely, the finger-bar and the bracket.

The peculiarity in the construction of the finger-bar consists in this, that it proceeds direct from the axle of the bearing wheel (which is made on the end of it), and that it is made in two pieces with a series of perforations where these two pieces meet, so as to permit of the ready adjustment of this finger-bar (by means of screw bolts and nuts) to the height of the crop to be cut, as shown in Figure 2 of the drawings hereinbefore referred to.

The bracket is the part to which I have before alluded as being insufficiently referred to and illustrated in the specification of this invention at present on the Register of Patents (and in the drawings and "description of drawings" forming part thereof).

In figure 3 there should be a beam shown underneath the pole *a*, extending backward about as far as the outer periphery of the draught wheel *a*, and forward a few feet beyond the draught wheel. To this beam the bracket should be shown as attached by two iron flaps, one bolted to the underside and one to the side of it, for the purpose of holding the bracket firmly in position. It should also be stated that the axle of the pinion *c* extends backwards horizontally about eighteen inches, and that a mitre-wheel of larger diameter than the pinion *c* works freely upon it about the centre, for the purpose of gearing into mitre-wheel *p*, when required, and so imparting the necessary motion to the knife-bar *f*, through eccentric *r* and connecting rod *t*. This large mitre-wheel being thrown in or out of gear by means of a hand-lever attached to a clutch connection at the extremity of said axle.

I claim the peculiar method of constructing both the finger-bar and the bracket in the manner and for the purposes substantially as herein described and explained.
