## PART 1.

## GENERAL REGULATIONS.

## Division 1.—Applications for Consents, &amp;c.

Section 1. Application for the Authority's consent to connect with the sewerage system, or to do plumbing and drainage work connected therewith, must be made in writing by the owner of the property to be so connected, or by his authorized agent.

Section 2. Such application shall give the precise location of the property, the name of the owner, and the name of the person employed to do the work, and shall be in the form prescribed by the Authority. For any wilful misrepresentation in such application the owner or authorized agent as aforesaid shall be guilty of an offence against this By-law. No consent given by the Authority shall be deemed to authorize anything not stated in the application, nor to confer or grant the right to lay a drain through any land intervening between the sewer of the Authority and the land proposed to be connected, and every owner or agent applying for the Authority's consent shall satisfy himself as to his legal right to drain through such intervening land, as he shall be solely responsible for any trespass or damage thereon or thereto.

Section 3. Consents to make connexions with the sewerage system will be issued only when the plumbing and draining in the property to be connected is planned to be made in accordance with the rules for plumbing and draining hereinafter prescribed, and after such plan has been inspected and approved of by the responsible officer appointed by the Authority for the purpose, or, in the case of new buildings, when a proper plan of the plumbing and of the drainage of the building into the branch, of which the Authority shall have fixed the position, has been approved of in writing by the Authority. All connexions with drains or sewers, and all plumbing and drainage connexions therewith, shall be made under the direction of the responsible officer of the Authority. Consent will not be given for the performance of any such work except upon condition that no person shall be engaged or employed as a workman in the actual performance of any plumbing or drainage work unless he be the holder of a licence issued by the Authority to do such work. Any person who shall at any time or at any place make up, form, affix, alter, or repair any fitting, pipe, bend, trap, or other thing connected or intended to be connected with the Authority's sewerage system, unless he be the holder of a licence from the Authority authorizing him to do such work, shall be liable to a penalty not exceeding Ten pounds. Any person, whether licensed as aforesaid or not, who shall alter, remove, or in any way interfere with any drain, fitting, pipe, bend, trap, or other thing connected with the Authority's sewerage system, unless the Authority's written consent has been previously issued to do such work at the premises concerned, shall be liable to a penalty not exceeding Ten pounds.

Section 4. Where the sanction, permission, authority, consent, approval, satisfaction, order, direction, opinion, indication, or notice of or from the Authority is necessary, whether specified in writing or otherwise, with regard to any act, matter, or thing mentioned in the By-law, the same may be given by and under the hand of the chairman of the Authority, or of the responsible officer, personally or through an inspecting officer appointed under him, who severally shall be competent to give the same and authorized on behalf of the Authority, to prescribe any conditions attaching thereto, and subject to and in accordance with which only the same shall be deemed to have been given.

Section 5. In any case in which the Authority shall be of the opinion that a compliance with any of the provisions of this by-law would in any particular case be vexatious or be

needless in the interest of public health, it shall be lawful for the Authority, by resolution, to dispense with or forbid such compliance in whole or in part as it shall think fit, or to authorize or direct such a modification or alteration of such provisions as shall, in its opinion, most nearly adapt the principle of those provisions to the particular case. It shall be unlawful to comply with any provision, or part of any provision, of which compliance shall have been forbidden, or to act contrary to or otherwise than as directed by such modification or alteration.

*Division 2.—Penalties, Recovery of Cost of Work, &c.*

Section 6. Where anything is by this By-law directed to be done, or forbidden to be done, or where any authority is given to the Authority or any of its officers to direct or to forbid anything to be done, and such act so directed to be done remains undone, or such act so forbidden to be done is done, then, and in every such case, the person making default as to the said direction or prohibition respectively shall be guilty of an offence against this By-law.

Section 7. Every person guilty of an offence against this By-law, not otherwise specially provided for by or under the authority hereof, shall be liable for every such offence, besides any costs or expenses which may be incurred in the taking of proceedings against such person guilty of such offence, as well as any costs or expenses which may be incurred in remedying such default, as particularly provided for in this By-law or the Acts, to a penalty not exceeding Ten pounds, and to a further penalty of One pound for each day during which such offence is continued by such person after notice of the offence shall have been given by the Authority to him; and such penalty shall be recoverable, notwithstanding that the Authority may not have chosen to exercise any power given to it by the Acts or by this By-law to remedy such default.

Section 43. *Cast-iron Pipes.*—Cast-iron drainage pipes and their fittings shall comply with the Australian standard specification, or, in the event of no such standard being in existence, with the standard approved by the Authority for cast-iron water pipes and their fittings of similar diameters.

Section 44. *Interceptor Traps.*—Where directed by the Authority, but not otherwise, an interceptor trap shall be fixed in the drain laid from any property to the sewer. Such trap shall be fixed as near as practicable to the boundary, and wherever practicable shall be within the boundaries of the property. The interceptor trap shall be provided with an inspection cap on the sewer side of the trap. If ordered, an approved manhole shall be provided for the trap.

Section 45. *Inspection Chambers.*—All drains shall, wherever considered necessary by the Authority, join in an inspection chamber at least 3 feet long by 2 feet wide, fitted with a closed cover. The portions of the drains crossing the floor of the inspection chamber shall be connected either in a straight line or by curved junctions in the floor of the chamber. All inspection chambers to be cement rendered (two parts sand and one part cement) to a smooth surface, and made watertight. The inspection chamber must be provided with a closed cover, and special ventilation must also be provided if considered necessary by the Engineer.

Section 46. *Inspection Openings.*—Every line of drain shall be provided with an inspection opening—inside and within 5 feet of the boundary line, at each junction not provided with an inspection chamber, at each change of direction, at each fixture, and in no case at greater than 30 feet intervals, and in paved areas these shall, if considered necessary by the responsible officer of the Authority, be brought to the surface and furnished with approved airtight covers. The area of an inspection opening shall be not less than the area of the drain.

Section 47. *Drain Openings Not in Use.*—The ends of all house drains not immediately connected with the plumbing fixtures and all inspection openings shall be securely closed with watertight imperishable materials. If stoneware or cement concrete, a stoneware, cement concrete, or cast-iron disc must be cemented in: if wrought iron, a plug must be screwed on the end; if cast iron, a cast-iron plug must be caulked in with lead.

Section 48. *Replacing or Inserting Pipes.*—Where it becomes necessary to remove a pipe to clear a stoppage or to insert a pipe or branch in an existing drain, such pipe so removed shall be replaced by an inspection pipe or inspection junction of the same length by one of the following methods:—

- (a) The top half of the socket of the new pipe and of the existing downstream pipe may be removed, but the bottom half shall in each case be left intact and the joints surrounded with concrete.
- (b) An approved split pipe with double collar surrounded with concrete may be used.
- (c) A length of not less than three pipes may be removed, the centre pipe replaced by an inspection pipe, and the pipes dropped back into place without springing or cutting.

Junctions in existing metal pipes shall not be made unless an approved closure pipe is used in each case. Springing pipes into position shall not be resorted to or allowed.

#### Division 14.—Basement and Cellar Drainage.

Section 49. *Fixtures.*—No water-closet, urinal, and/or other fixture shall be placed in any cellar or basement, or on any floor below ground level, unless by consent of the Authority, and then only when, in the opinion of the Authority, other provision cannot be made. The owner shall submit such plans and/or other information as the Authority may require, and shall undertake in writing to accept all risk of damage that may occur. If satisfied that the ventilation and lighting provided are in accordance with section 151 or 152 of these By-laws, and all other conditions have been complied with, the Authority may give its consent; provided always that such consent may be revoked by the Authority at any time, and that upon 14 days' notice of revocation such fixture shall be abolished by the owner.

Section 50.—*Risk of Back Flow.*—Where such cellar, basement, or floor below ground level is at such a level as may, in the opinion of the Authority, involve risk of back flow in the event of the sewer becoming overcharged, the sewage from all fixtures therein shall be raised by ejector, syphon, or other approved mechanical appliance to such height as ordered and discharged into the sewer as and where directed.

Section 51. *Seepage Drains.*—In no case shall seepage drains from cellars, basements, or any floor below ground level be discharged into a sewer without the consent of the Authority. Where such discharge is permitted by the Authority the seepage shall be raised by ejector, syphon, or other approved mechanical appliance to such height as ordered, and discharged into the sewer or elsewhere as and where directed.

#### Division 15.—Polluted Areas.

Section 52. *Connexion.*—The Authority may, if it thinks fit, authorize or require that any of the following places:—namely, stables, cow-sheds, dairies, market places, areas for washing vehicles, and any other polluted place, be connected with the sewers, subject to such conditions as the Authority may impose.

Section 53. *Conditions Governing Connexion.*—No such connexion shall be made unless the following conditions have been complied with:—

- (a) The place to be connected shall, if required, be so roofed as to prevent the entry of rain water from it to the sewers, and in no case shall rain water be permitted to discharge on to such place from adjoining surfaces.
- (b) The place to be connected shall be paved above the level of the yard with approved materials, and graded to the satisfaction of the responsible officer of the Authority.
- (c) The drain from any such place shall be provided with an approved silt trap with a removable grating and connected with the drain inside the boundary line of the property.

Section 54. *Manure Bins.*—(a) Manure bins must be provided for all stables, or cow-yards where the local Council's By-laws demand their construction, or where the locality is closely built on.

(b) All the manure bins must have the inside surfaces rendered with cement mortar, and must be made impervious throughout, and provided with an approved close-fitting cover. Walls of new manure bins must, unless otherwise approved, be at least 9 inches in thickness, built of brickwork laid in cement mortar. If an outlet pipe be provided for a manure bin, it must be properly connected with the Authority's sewers. Branches in house drains must be provided in all cases where manure bins exist, for their connexion whenever the Authority shall deem it necessary.

#### Division 16.—Pipe Trenches.

Section 55. The trench for the house drain from any property shall be so dug as to meet the Authority's sewer at the position provided or to be provided for the connexion.

The material from the trench shall be so placed as to cause the least possible obstruction and inconvenience to the public. Proper barriers and lights must be maintained where necessary to guard against accident during the progress of the work.

In refilling the trench selected refilling shall first be deposited around and over the pipe to a depth of 12 inches and carefully consolidated, after which the remainder of the trench shall be filled in layers and rammed or flooded, as ordered or approved.

No stone shall be used in refilling until earth or gravel has been placed over the pipe to a depth of 1 foot, or more if directed.

On no account shall any water, sand, earth, &c., be allowed to enter the sewer during the progress of the work.

On completion of refilling the surface shall be restored as nearly as possible to the same condition as it was in before operations were commenced, unless the owner in writing otherwise requires.

#### Division 17.—Laying Drains, &c.

Section 56. *Position and Line.*—Every drain and every fitting, &c., connected therewith shall be laid and fixed where directed by the responsible officer of the Authority. As far as possible all drains shall be laid in straight lines; where changes of direction occur they shall be made in manholes, or by a suitably curved pipe with an inspection opening on each straight pipe next adjoining the curve.

Section 57. *Oblique Junctions.*—Where any drain joins another drain the junction shall be made obliquely at an approved angle with the direction of flow of such drain. Right-angled junctions shall not be made.

Section 58. *Connexion to Sewer.*—The position of the Authority's connexion to any premises shall be located prior to the commencement of any drain excavation. The disc stopper at the point of connexion to the sewer shall be carefully removed so as not to injure the socket or allow any debris to enter the sewer.

The first length of the drain at the branch shall be an inspection opening.

Section 59. *Gradients.*—All drains shall be laid on an even grade, and, except by special permission in writing, from the Authority, such gradients shall in no case be less than the following minimum permissible gradients:—

4-in. diameter . . . . .	1 in 40
6-in. diameter . . . . .	1 in 60

In cases where the grades of 4-in. and 6-in. drains are steeper than 1 in 10 and 1 in 15, respectively, concrete stops shall be placed as and where directed by the responsible officer of the Authority.

Section 60. *Depth of Drains.*—Drains of stoneware or concrete pipe, unless bedded in and encased in concrete of not less than 6 inches thickness over any part of the drain, shall be laid at a depth to the socket of the pipe of not less than the following:—

- (a) In public thoroughfares, rights-of-way, or other open spaces subject to vehicular traffic—2 ft. 6 in.
- (b) In private property not subject to vehicular traffic—1 foot.

No person shall alter the surface over any drain so as to deprive it of the minimum depth of cover specified by the preceding paragraph, unless approved measures are adopted to protect the drain.

Section 61.—*Laying Drains.*—All pipes shall be laid to such lines and grades as may be shown on the plans or directed, and, except where otherwise ordered, holes shall be cut in the bottom of the pipe trench to receive the sockets of the pipes, and all the pipes shall be carefully bedded with the barrel on the solid ground.

In the case of rock-bottomed trench, or where directed, the pipes shall be bedded up to the horizontal diameter upon not less than 2 inches thickness of approved sand or other approved material measured from the barrel of the pipe.

In water-charged ground, or where the foundation is bad, or near roots of trees, or where directed, the drain shall be formed of cast-iron pipes; or, if of stoneware or concrete pipes, they shall be bedded on and encased in concrete as ordered, and, if ordered, supported upon approved timber foundations as directed.

Drops or bends in vertical or inclined drains shall have a concrete support placed under and around as directed.

Portland cement concrete brought to a smooth surface must be used in each of the following cases:—

- (i) Around and under gully basins, the exposed surfaces to be rendered in cement mortar, two parts sand, one cement.
- (ii) Around the top and for 6 inches below the surface of the ground of vent pipe sockets where exposed.
- (iii) Around the top and for 6 inches below the surface of the ground of disconnexion traps when the surface is exposed.
- (iv) Under and around bends rising vertically off oblique branches, and under all drainage traps.

#### Division 18.—Drains Under Buildings.

Section 62. Every drain shall, as far as practicable, be so constructed as not to pass under any building. Where a drain does pass under a building it shall, if practicable, be laid in a direct line for the whole distance beneath such building, and shall have approved means of access for rodding outside the

walls of the building, and also, if directed, beneath the building. The pipes used shall be of stoneware or concrete, surrounded by not less than 6 inches of concrete, or of cast-iron.

In any case in which pipes pass through or under walls, approved provision shall be made to prevent injury to the pipes by settlement, and, in outer walls, to prevent the ingress of vermin.

#### Division 19.—Joints, Drainage.

Section 63. *Stoneware and Cement Pipes.*—Joints of stoneware and cement pipes shall be filled in solidly with cement mortar neatly splayed off, or with other approved material. After each joint is made the interior of the joint shall be wiped clear of surplus mortar before the next pipe is laid.

Section 64.—*Cast-iron Pipes.*—All joints in cast-iron pipes must be stemmed with approved gaskets and so filled and caulked with lead or other approved material as to make them gas and water tight.

All connexions between stoneware or concrete pipes and cast-iron pipes shall be made as for joints in stoneware or concrete pipes.

#### Division 20.—Drainage Ventilation.

Section 65.—*Vents on Main House Drain.*—The main drain shall be ventilated at its upper end by a pipe ventilator erected vertically, and such ventilator may be a soil pipe.

If the drain is provided with an interceptor trap there shall be in addition a ventilator connected to the interceptor trap shaft. In such cases there shall, wherever practicable, be a difference in height of not less than 6 feet between the tops of the vents at the upper and lower ends of the drains respectively.

Section 66. *Vents on Branch Drains.*—Branch drains need not be vented if the drainage traps are within 15 feet from the main house drain, measured along the line of pipes, including the drop, if any, from the centre line of the main drain to the centre of the outlet side of the water seal of the drainage trap, unless otherwise ordered by the Authority, in which case they must be vented as directed.

Section 67. *Height of Vents.*—Every vent pipe extending upwards from a soil or drain pipe shall be carried not less than 6 feet higher than any window or door within a distance of 30 feet thereof, and in any case at least 21 feet above ground level and 6 feet above the level of the eaves or coping, or to such additional height as may be necessary to prevent effectually the escape of foul air into any building within the vicinity.

Where the vent pipe extends into a gable of the building it shall further be carried at least 2 feet above the point of intersection with the roof.

Such pipes shall, where necessary, be provided with sufficient clips or stays to support them effectively.

Section 68. *Chimneys.*—No chimney shall be used as a ventilator to any drain, soil, or waste pipe.

Section 69. *Vents Near Chimneys.*—Vents must, as far as possible, be kept away from chimneys and ventilating air shafts. Where a ventilator pipe terminates 6 feet or more from a chimney opening or ventilating air shaft, the requirements of section 67 shall apply, but where the distance is less than 6 feet the vent pipe shall, unless otherwise ordered, terminate not less than 2 feet below the top of such chimney or air shaft.

Section 70. *Vents Adjoining High Buildings.*—In any case in which a building is erected next to a previously existing building of less elevation, and any windows of the new building are located within 30 feet of any existing vent stack on the lower building, the owner of such new building shall defray the cost of or shall himself make such alterations to the vents of the previously existing building as necessary to conform with section 67.

The owner of the lower or existing building shall make such alterations upon the receipt of money, or security therefor sufficient for the purpose, from the owner of the new or higher building, or shall permit at the election of the owner of the new or higher building, the making of such alteration by the owner of such new or higher building.

Section 71. *Size of Drainage Vents.*—Drainage vent pipes shall, unless otherwise ordered, be of not less than 4 inches diameter in the case of educt vents and not less than 3 inches diameter in the case of induct vents, with the provision that where more than one educt vent is provided the vent on the longest line of drain shall be of not less than 4 inches diameter and all others of not less than 3 inches diameter; but in no case shall a drainage vent be of smaller diameter than necessary to comply with the requirements of section 86.

Unless otherwise ordered or approved every such vent pipe shall be without return bend and provided with basket end or educt or induct cowls as directed.

Section 72. *Materials, etc.*—Drainage vent pipes situated wholly outside of buildings shall be of cast-iron, galvanized wrought iron, double galvanized sheet iron, or other approved material above ground, and of stoneware or concrete beneath the surface of the ground. Galvanized sheet-iron vent pipes shall not be less gauge than 20 for 3-in. and 4-in. diameter

pipes and 18 for 6-in. pipes, and where ordered the first 6 feet above ground shall be of cast-iron or other approved material. Drainage vent pipes inside a building shall, unless otherwise approved, be of cast-iron or of galvanized wrought iron. The circumferential joints of galvanized sheet iron vent pipes shall be riveted and soldered. All galvanized sheet-iron vent pipes used to ventilate the drainage system, or used as anti-siphonage pipes to soil or waste pipes from closets, slop sinks, or urinals, must be coated with hot tar or asphaltum inside before erection.

Section 73. *Gratings.*—Openings for ventilation shall be effectively protected by approved gratings of ample area. The aggregate area of apertures in any such grating shall not be less than the sectional area of the pipe or drain to which such grating is fixed. Every opening for ventilation shall at all times be kept perfectly free from obstruction.

Section 74. *Pipe Clips, etc.*—There shall be at least one pipe clip to each 6-ft. length of vent pipe.

For cast-iron or wrought-iron pipe approved coated wrought-iron clips and for galvanized sheet iron pipe 1½-in. x 14-gauge galvanized band iron clips shall be provided. Wherever it is necessary to fix pipes clear of the wall approved extension clips shall be used.

Clips in the case of cast-iron pipes must be placed tight up against the bead or underside of collar.

Section 75. *Attachment to Walls.*—Where a galvanized sheet iron pipe, with or without offset, is carried up above the brick wall of a building a galvanized wrought-iron clip must be used, leaded into the wall near the top wherever possible and bolted against the vent pipe.

All band iron clips of vent pipes to brick walls shall be fastened with nuts and bolts, leaded in, or by means of T-headed bolts passed through the brick joints and turned at right angles to the joints.

Section 76. *Supporting Vents.*—Wherever a vent pipe with offset is not more than 9 feet long above such offset it need not be stayed; if longer, it shall be stayed as directed with ½-in. galvanized wrought-iron piping.

An unsupported length of 15 feet above highest clip of straight vent pipe without offset will be permitted.

Section 77. *Induct Vents.*—Every induct vent shall be securely supported in an approved manner.

#### Division 21.—Drainage Traps.

Section 78. *Trapping of Inlets.*—Every inlet to any drain other than inlets provided for ventilation in accordance with the By-law shall be provided with an approved trap. No inlets to any drain connecting directly with a sewer shall be constructed within a building other than such inlets necessary for the apparatus of any water-closet, urinal, or housemaid's slop sink.

Section 79. *Classes of Traps.*—Four classes of traps shall be used—

- (a) "Traps" for intercepting gases only, to be of round-section and self-cleansing form, but not such as to empty by momentum or suction.
- (b) "Silt traps" for intercepting both gases and solids, to have slightly tapered sides, flat bottom, and rounded angles, and provided with approved means for catching and removing solids.
- (c) "Grease traps" for solidifying and collecting grease or other semi-fluid matter liable to foul the pipes, to be of such form as approved.
- (d) "Oil traps" for collecting all kinds of oil and to be of such form as approved.

The term "yard gully" is applied to traps (a) in cases where they are used externally and fitted with dished tops and gratings. The tops of inlets of all disconnector traps must be at least 6 inches above the surface of the surrounding ground.

Section 80. *Water Seal.*—All traps must have a water seal of at least half the diameter of the outlet pipe, but in no case of less than 2 inches.

Section 81. *Provision of Yard Gullies.*—A yard gully must, wherever practicable, be provided in the yard of every property, as near as practicable to the kitchen or back door, with a tap placed over it at a height of not less than 2 feet. No yard gully shall be situated within a building. Where it is not practicable to provide a yard gully, a slop sink must be provided within the building.

Section 82. *Details of Yard Gullies.*—Yard gullies shall be fitted with dished tops and gratings, the dished top being in one piece with the trap or jointed thereto by spigot and faucet, or as otherwise approved.

The depth of the dished top to the grating must be not less than 6 inches. Grating to gully traps must not be less than 6½ inches over all, and the gratings to all disconnector traps to be convex in section, with openings of suitable outlet capacity. All gratings must be fixed down in an approved manner with bitumen or wedges of lead.

Section 83. *Kerbing, etc., to Yard Gullies.*—Yard gully basins and the dished tops of silt traps must be so surrounded with an approved impervious kerbing as to prevent the access of

surface water to the drains, and, if directed, the wall at the rear of the gully or silt trap, if of brick or stone, must be cement rendered to the height of the tap over same, and if of wood the wall must be provided with an approved galvanized sheet iron apron. The internal diameter of kerbing around gully traps measured from face of cement rendering must not be less than 15 inches, and must be neatly rounded to meet the gully top.

PART 5.  
PLUMBING.

Division 23.—General.

Section 87. *Waste Pipes.*—Except by permission of the engineer, separate waste pipes shall be provided for each of the following classes of polluted water, viz:—

- (a) Dirty water from baths, sinks, lavatory basins, and wash troughs, and other waters containing a small proportion of soap and/or dirt.
- (b) Greasy water from kitchen and scullery sinks or other fixtures, in such cases where grease traps are ordered or required.

Section 88. *Soil Pipes.*—Soil pipes shall be provided for soil water from closets and other waters containing faecal matter, and for urinal waters from slop sinks and urinals, and, where directed, for discharges from operating theatres and morgues, and in no case shall such waters be discharged into any waste pipe as defined by this By-law, except by permission of the Engineer.

Section 89. *Connections to Drain.*—All waste pipes shall discharge under the grating of a yard gully or into a disconnector trap. All soil pipes, including those for urinals and housemaids' slop sinks, must be connected direct to the drain. These tanks may be of 22-gauge galvanized sheet iron, or 24-gauge corrugated iron.

Unless otherwise directed by the Authority, the storage tanks may be placed in the water-closet apartment itself, on the roof over a flat or gutter, or in an accessible place between the ceiling and the roof, in which latter case a safe of galvanized-iron, lead, or other approved impervious material, with overflow, shall be fixed under the storage tank.

Section 162. *Venting Closet Pans.*—Unless otherwise directed or permitted, every closet pan on an upstairs floor shall discharge into a soil-ventilator pipe, except that any closet pan on a floor which is not more than 8 feet in height from the ground surface level may be ventilated by an anti-syphonage vent only, in accordance with the requirements of sections 80 and 108 and discharge into a soil pipe without extension as a ventilator pipe; provided that no fixtures at a lower level are connected to such soil pipe.

Any closet pan where ordered, and, also, unless otherwise directed, every internal closet pan which is more than 4 feet from a fully vented soil pipe drain as measured along the axis of the pipe between the centre of soil pipe and centre of pan, shall be ventilated by an anti-syphonage vent in accordance with the requirements of section 86 sufficiently close to prevent syphonage, and in no case more than 18 inches from the trap. Notwithstanding the above, all "S" trap pans must be provided with anti-syphonage vents.

Section 163. *Grouped External Closets.*—Where there are more than three external water-closet pans grouped on the ground floor or in the yard of any premises special provision must be made to prevent syphonage.

Section 187. *Discharges From Overflows.*—Overflows may discharge into the open air above ground floor level only when the discharge will not cause any inconvenience or nuisance. ## WATER SUPPLY.

Section 190. *Supply of Water to Fixtures.*—All water-closets and other plumbing fixtures shall be provided with a sufficient supply of water for flushing purposes to keep them at all times in proper and cleanly conditions.

Every owner of property who desires, or has been ordered by the Authority, to provide sanitary appliances for his own property and to connect his property with the sewers of the Authority, shall before or at the commencement of the work of making such connexion, provide piping approved of by the Authority for the conveyance of water, and shall cause the piping to be joined at the most convenient water supply main, or, with the permission of the Authority, to some pipe already joined to the main. Such piping shall be of capacity sufficient to supply all sanitary fittings on the property freely and continuously, and convey to the flushing cistern, flushing tank, or other flushing apparatus of each water-closet on the property enough water to fill the same at a rate of not less than 1 gallon per minute, and the owner shall cause such piping to be connected with the cistern before the completion of the work.

The water supply to any fixture shall be so arranged that there shall be an actual physical discontinuity between the water stored or used in any such fixture and that in the water service pipe.

Section 191. *Material, Condition, Capacity, &c., of Water Supply Piping.*—The entire length of the water supply piping from its connexion with the water supply main to the water-closet flushing cistern or other fixture shall be such as is, in the opinion of the Authority, suitable in regard to material, condition, and capacity to convey a sufficiency of water for the sanitary requirements of the particular tenement.

The owner shall keep the piping from becoming, whether by reason of corrosion or other cause, of insufficient capacity to fill the flushing cistern, storage tank, or other flushing apparatus at the rate of not less than 1 gallon per minute.

Section 192. *Fixtures Not Connected With Sewers.*—No water service pipe shall be laid to supply any fixture in any property in any sewerage area unless such fixture is connected with the sewers of the Authority, or unless special permission in writing has been previously given to lay such service pipe.

Section 193. *Storage Tanks.*—Water supply pipes to storage tanks for internal closets shall be of not less than  $\frac{1}{2}$ -in. diameter and be provided with stop taps and high-pressure ball

valves, except where the elevation of the storage tank is not sufficient to allow of high-pressure ball valves being used. In such cases the permission of the Authority shall be obtained to fix low-pressure ball valves. Where the head of the water supply of the storage tank to the flushing cistern is less than 20 feet, a low-pressure ball valve shall be provided to the cistern.

Outlets from storage tanks shall not be less than  $\frac{1}{2}$  inch for one or two cisterns, and 1 inch for three to six cisterns.

Wherever a larger number than six cisterns is fixed, the size of the outlet shall be proportionally increased. The overflow from a storage tank shall be  $1\frac{1}{4}$  inches in diameter, and a stop tap shall be fixed on the rising supply pipe to the tank.

Full way gate valves shall be provided between storage tank and flushing apparatus.

Section 194. *Supply Pipe Connexion With Flushing Cistern.*—In all water-closets, where directed, a piece of lead or copper pipe not less than 12 inches in length shall be used between the flushing cistern and the supply pipe.

The foregoing By-law was made and passed by the Dandenong Sewerage Authority at a special meeting held on 19th May, 1937, and confirmed at a subsequent special meeting of the Authority held on the 7th July, 1937.

And Next.—We, the said Philip Charles Holmes Hunt, Lionel Findon Miller, and Roland Cameron Evans, say:—
