19 " "	63	144 6			
20 " "	77	176 6			

Proportion (in any place).
One improver to every two fully-paid workers.

Clauses, other than clause 2, of the said Determination for this Section as amended on the 16th February, 1951, shall remain in force.

By Authority: W. M. HOUSTON, Government Printer, Melbourne.

•

There is a strong possibility that the data points are scattered around a central value, which might be the mean. The distribution of the points is quite irregular, but there are some noticeable clusters. For example, there is a small group of points near the top center and another near the bottom left. The overall trend seems to be that the points are more densely packed in the middle of the plot area.

The points are scattered across the plot area, with some appearing to form a faint, elongated shape. There is a significant number of points in the lower right quadrant, while the upper left quadrant is mostly empty. The points are small and dark, making them stand out against the white background. The overall appearance is that of a random distribution with some underlying structure.
